PART D PROPOSED VARIATIONS TO THE CONDITIONS IN CURRENT ENVIRONMENTAL PERMIT

D1. Condition(s) in the Current Environmental Permit :	D2. Proposed Variation(s) :	D3. Reason for Variation(s) :	D4. Describe the environmental changes arising from the proposed variation(s) :	D5. Describe how the environment and the community might be affected by the proposed variation(s) :	D6. Describe how and to what extent the environmental performance requirements set out in the EIA report previously approved or project profile previously submitted for this project may be affected :	D7. Describe any additional measures proposed to eliminate, reduce or control any adverse environmental impact arising from the proposed variation(s) and to meet the requirements in the Technical Memorandum on Environmental Impact Assessment Process :
EP Condition 2.28 – The rock crushing plant to be used in construction of the Project	-Re-location of rock crushing plant from Shatin Cavern to Ngau Kok Wan, Tsing Yi; -Increase in dust removal efficiency of dust collector from 99% to 99.5%; and -Addition of Figure 2 (based on Figure 1.1 of the ERR) to include works area for the rock crushing plant at Ngau Kok Wan, Tsing Yi.	-Due to the lack of stock piling area in Sha Tin and to match with the construction programme, off-site crushing plant at Ngau Kok Wan, Tsing Yi is proposed; and -The removal efficiency for the dust collector at the proposed rock crushing plant in Ngau Kok Wan is increased to 99.5%.	The proposed rock crushing plant and the associated barging point and marine emission would mainly induce air quality impact on the sensitive receivers nearby. The key environmental issues induced are described in Section 2.5 of the ERR.	As there are new works areas in Ngau Kok Wan, Tsing Yi, involving the rock crushing plant and stockpiling area and associated barging points, new sensitive receivers in Tsing Yi area would be affected by the proposed rock crushing plant especially on the air quality impact. Potential air quality impact and new sensitive receivers are described in Section 3and Section 3.3.2 of the ERR.	The potential air quality impact, water quality, land contamination and landscape and visual impact have been reviewed and confirmed that the relevant performance requirements set out in the approved EIA Report (AEIAR-202/2016) and the Technical Memorandum on EIA Process would not be exceeded or violated, as shown in Sections 7 of the ERR.	The portable air purifier will be installed at the affected sensitive uses. The detailed information is presented in Section 3.8 of the ERR.
No	The provision of portable APS, commissioning test and necessary submissions	-The portable air purifier is proposed to improve the indoor air quality of the affected sensitive uses; and -Commissioning test should be conducted to verify the performance of the proposed portable air purifier. 1 INTRODUCTION

1.1 Background

1.1.1 In May 2012, Drainage Services Department (DSD) commenced a detailed feasibility study on "Relocation of Sha Tin Sewage Treatment Works to Caverns" (the Feasibility Study). The findings of Feasibility Study affirmed that relocating the STSTW to caverns to be constructed at Nui Po Shan of A Kung Kok is technically feasible and financially viable.

1.1.2 The Relocation of STSTW to Caverns is a Designated Project (DP) covering DP elements under items F1, F2, F4, Q2, K10 in Schedule 2 of Part I and Item 11 in Schedule 2 of Part II of the Environmental Impact Assessment Ordinance (EIAO). An Environmental Impact Assessment (EIA) study for the Project was undertaken under Agreement No. CE 30/2014(DS) "Relocation of Sha Tin Sewage Treatment Works to Caverns: Caverns and Sewage Treatment Works – Investigation, Design and Construction". The EIA Report was approved on 28 November 2016 under EIAO. Following the approval of the EIA Report, the Environmental Permit (EP) (EP No: EP-533/2017), covering the construction and operation of the relocated STSTW, was granted on 31 March 2017.

1.1.3 Preliminary reviews were conducted to assess the technical feasibility for the handling of excavated rocks from caverns construction. It is also suggested that operating a designated rock processing for the cavern construction in Sha Tin was risky because of the lack of stock piling area and programme mismatch between the setting up of rock processing facilities and caverns excavation. On the other hand, Lam Tei Quarry cannot handle all rocks generated from construction of the Cavern and Sewage Treatment System (CSTS), to consume the un-processing rock materials for reclamation purpose within Hong Kong is not feasible as according to consultations with the concurrent/ potential projects, it was identified that those major reclamation contracts, including Tung Chung East Reclamation, HKIA 3rd Runway Project, etc do not require any rocks from the excavation of the CSTS, due to programme mismatch.

1.1.4 During the construction of caverns complex, it is envisaged that a very significant amount of rocks will be excavated and thus generated from the excavation works of tunnels, adits, shaft and caverns. An estimation is that about 2.00 million cubic meters (or 5 million tonnes) of rock will be excavated and thus produced. Given the fact that Hong Kong has a huge demand of aggregate for construction which majority of them have to be imported from Mainland China, current practice of exporting the excavated rocks to Mainland cannot fully utilize such resources. On the other hand, the excavated rocks from caverns construction would not only increase the burden of the government's public fill facilities which is running out of capacity in the near future, but also would waste the valuable natural resources of virgin rock materials from the construction of caverns in an efficient and environmental friendly manner. From environmental protection perspectives, it is desired to maximize the usage of rock material within Hong Kong as practicable as

possible. The rock materials could be further processed to suitable sizes for consumption within Hong Kong, such as rock crushing as aggregates for other suitable usages. Delivery of rock materials outside Hong Kong is not an option. This is also in-line with the Government's environmental management policy of inert C&D materials.

1.1.5 In view of the above, two potential off-sites are identified for temporary stockpiling of rocks, setting up and operating rock crushing facilities. It is proposed to set up rock crushing and screening facilities, temporary rock and aggregates stockpiling and barging point at Ngau Kok Wan as the first phase, and temporary stockpiling and barging point at Wok Tai Wan, Tsing Yi as the second phase if considered necessary.

1.1.6 In July 2019, DSD obtained the Development Bureau's (DEVB's) policy support in its application for a temporary government land allocation for the two sites and is currently undertaking technical studies to address concerns regarding the environment, land traffic and marine traffic.

1.1.7 The proposed works area at Ngau Kok Wan and Wok Tai Wan are located outside the original works area addressed in the approved EIA Report (AEIAR-202/2016) of CSTW (The Project). Meinhardt Infrastructure and Environment Ltd (MIEL) is appointed by China State – Alchmex Joint Venture (CSAJV) to provide professional services in respect of an assessment to determine the potential environmental impacts arising from the operation of rock processing at the two off-sites (hereinafter called "the Project").

1.2 Purpose of this Environmental Review Report (ERR)

1.2.1 In view of the current forecast of rock excavation in Sha Tin Cavern, the rock crushing facilities at Ngau Kok Wan could handle the excavated rock. Once the rock excavation come to the peak, the temporary stockpiling and barging point at Wok Tai Wan may be required. This ERR would focus on the environmental impact associated with the operation of rock crushing facilities at Ngau Kok Wan. Whereas the environmental impact associated with the operation of temporary stockpiling at Wok Tai Wan would be carried out in the second phase if considered necessary.

1.2.2 The purpose of this ERR is to provide an assessment of the relevant environmental considerations pertaining to the construction and operation of the Project. The objectives of the ERR include providing information on the potential nature and extent of environmental issues as a result of construction and operation of the Project, providing details of legislation and guidelines for environmental aspects relevant for the Project and identifying potential issues and implementable mitigation measures and environmental audit requirement to minimise environmental impacts.

1.2.3 This ERR has been prepared in accordance with the relevant requirements of the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM), and includes the preliminary environmental assessment of air quality, noise, water quality, waste management, land contamination, ecology, cultural heritage and landscape and visual issues during the construction and operation stages of the Project.

1.2.4 Variation of the EP would be sought accordingly pursuant to Section 13(5) of EIAO would be applied with this supporting Environmental Review Report.

1.3 Structure of this Report

1.3.1 This report comprises the following sections including this introductory section:

- **Section 2 Project Description**: provides a detailed description of the Project scope and activities, on which the report is based;
- **Section 3 Air Quality Impact Assessment**: assesses the potential air quality impacts arising from the construction and operation of the Project;
- **Section 4 Water Quality Impact Assessment**: assesses any potential water quality impacts arising from the construction and operation of the Project;
- **Section 5 Land Contamination:** assesses the potential land contamination issues associated with the Project;
- **Section 6 Landscape and Visual Impact Assessment:** assesses the potential landscape and visual impacts arising from the construction and operation of the Project;
- **Section 7 Conclusion**: summarises the overall potential environmental impacts and mitigations for the Project.

2 DESCRIPTION OF PROPOSED WORKS

2.1 Introduction

2.1.1 The proposed works comprise of rock crushing and screening facilities, temporary stockpiling rock and aggregate and barging point at Ngau Kok Wan.

2.2 Project Details

2.2.1 As described in **Section 1**, the proposed works comprise rock crushing and screening facilities, temporary stockpiling area and barging points. The location plan of the scope of the works is presented in **Figure 1.1**.

2.2.2 The details of the works are provided as follows:

Off-site at Ngau Kok Wan, Tsing Yi

2.2.3 Currently the concerned site area in Ngau Kok Wan has been handed over to CSAJV for the Project by DSD. The location of the concerned site at Ngau Kok Wan is illustrated in **Figure 1.1**.

2.2.4 The existing site is zoned "Other Specified Uses" annotated "Recreation and Tourism Related Uses" on the approved Tsing Yi Outline Zoning Plan No. S/TY/30. As it is planned to use the concerned area for 5 years only and is considered as temporary use, according to the Notes of the approved Tsing Yi OZP, as long as they comply with any other relevant legislation, the conditions of the Government lease concerned, and any other Government requirements, there is no need to conform to the zoned use.

2.2.5 Ngau Kok Wan can be conveniently accessed by marine traffic with barges to/from the existing seawall. Land traffic access is also available through an existing access road leading from North West Tsing Yi Interchange.

2.2.6 The site area at the open space is approximately 11,000m^2. It is proposed that a rock crushing facilities to be located at Ngau Kok Wan, and serve as the barging point for loading rock materials on barge and transport to downstream receivers. No dredging/marine piling works is expected for the barging points construction.

2.3 Construction and Operation of Rock Crushing Process and Associated Logistics

2.3.1 Excavated materials generated from the rock cavern in Shatin would be delivered to the rock crushing and screening facility in Ngau Kok Wan for further processing. The excavated materials will undergo crushing process, screening for the appropriate size, and stockpiling accordingly. The handled excavated rock will

be temporary stockpiled or delivered to downstream receivers as identified by the Contractors.

Barging Facilities

2.3.2 It is expected that the existing seawall will be utilized for the barging point with conveyor facilities. No dredging works is required for the construction of barging points at Ngau Kok Wan.

2.3.3 Diesel- generator will be deployed on site for power supply of the conveyors.

Rock Processing Facilities

2.3.4 It is proposed that two sets of rock processing facilities, and necessary auxiliaries to be set up at Ngau Kok Wan for handling excavated rocks. Each rock processing facility consists of vibrating feeder, primary, secondary and tertiary crushers, and vibrating screens for each stage of crushing.

2.3.5 The excavated rock will be delivered to Ngau Kok Wan by dump trucks, and then be fed into primary jaw crusher through a vibrating feeder. The typical output size for primary jaw crusher is about 20mm to 200mm. Then the crushed rocks will be sent for secondary crushing and any remaining oversized rocks will be further processed by a tertiary crusher. Finally, the crushed rocks of around 3mm to 50mm will be screened, stockpiled or sent to downstream receiver. Maximum output capacity of the rock crushing and screening facilities for Grade I and Grade II rocks would be 1,400 tonnes per hours.

2.3.6 Diesel-generators would be deployed on site as power supply for the rock processing facilities.

2.3.7 Electric supply has been applied and only able to provide power supply on other necessary auxiliaries for the operation of the rock processing plant includes control room, site office, car park and storage building. However, it may not be able to provide stable power supply for the conveyors and crushing facilities.

Stockpiling area

2.3.8 The handled excavated rock will be stockpiled at Ngau Kok Wan and minor site formation works would be required at the proposed area.

2.4 Construction Programme

2.4.1 This Contract No. DC/2020/05 has been commenced in July 2021 and the need for rock crushing facilities will be required starting from mid-2022 onwards. The facilities are anticipated to operate until end of 2024. Subsequently, the facilities will be demolished, the project site will be reinstated and returned by the end of 2024.

2.5 Key Environmental Issues

2.5.1 The key environmental parameters relevant to the rock processing works are detailed below.

2.5.2 **Air Quality**: Potential air emissions would be induced by the proposed works such as proposed rock crushing plants, temporary stockpiling, barging point, barge traffic and land traffic. These activities, in conjunction with existing concrete batching plants, asphalt plants and existing open road traffic may lead to potential cumulative air quality impacts on the nearby air sensitive receivers.

2.5.3 **Noise**: The nearest noise sensitive receiver is located over 300m from the proposed barging point, hence the proposed crushing operation and barging activities would not induce unacceptable impacts on the nearby NSRs. It would be unnecessary to conduct further review on noise impacts.

2.5.4 **Water Quality**: Potential construction phase water quality impacts would likely arise from site runoff from dust suppression and rainfall, and the sewage from construction workforce and chemical spillage. Potential water quality impacts may also arise from the operation of proposed barging point.

2.5.5 **Terrestrial and Aquatic Ecology:** Relevant literature was reviewed including Technical Study in Underground Quarrying in Hong Kong - Investigation, Final Technical Report on Preliminary Assessment of the Selected Underground Quarry Site - Preliminary Environmental Review (TR1B) (CEDD, 2020). It is considered that an ecological assessment is not required as the Project Site is not inside recognised sites of conservation importance and the proposed development would not affect any important habitats and any habitats supporting significant population of wild fauna or flora species of conservation importance. Nonetheless, good site and construction practice shall be implemented to avoid impacts on the natural environment.

2.5.6 **Land Contamination:** The previous land use history of the Project Site of Ngau Kok Wan are barging point and open storage of materials. As the site was observed to be unpaved, potential onsite handling and storage of chemicals for vehicle/ equipment maintenance are anticipated. There are potential land contamination issues at Ngau Kok Wan Project Site. Detailed land contamination assessment is conducted in this ERR.

2.5.7 **Cultural Heritage:** No cultural heritage resources were identified within or in the vicinity of the proposed project site at Ngau Kok Wan, potential impact on cultural heritage is not anticipated.

2.5.8 **Landscape and Visual:** The Project Site is proposed to be used for the period from mid 2022 to 2024 tentatively. The site would be reinstated to the existing conditions after use and no permanent landscape and visual impact would be induced. Potential landscape residual impacts may arise at Ngau Kok Wan and

potential visual impacts at the Project Site. Detailed landscape and visual impact assessment are discussed in this ERR.

2.5.9 **Waste Management**: Owing to minor construction work for the erection of barging facility, minimal construction waste is expected. General refuse will be generated by the workforce, however, given small workforce, minimal general refuse from workforce is expected. As such, no adverse environmental impact is anticipated with respect to solid waste management.

2.5.10 **Hazard to Life**: The Ngau Kok Wan site is not in close proximity of any PHI, and it is outside the 1-km consultation zone of Shell Tsing Yi Terminal. Furthermore, there is no use of explosives in the proposed rock crushing facilities. Hence, no concerns in hazard to life is anticipated.

2.5.11 The potential environmental impacts associated with the proposed works are summarized in **Table 2.1** below.

Note:
√ - Potential impact to be further reviewed in this ERR
X - Potential impact associated with the proposed works is not expected

2.6 Potential Concurrent Projects

2.6.1 There are no potential concurrent projects in the vicinity of the proposed works, no potential cumulative environmental impact from concurrent projects are anticipated.

3 AIR QUALITY

3.1 Introduction

3.1.1 The potential air quality impacts due to the proposed rock processing works and associated logistics at Ngau Kok Wan in Tsing Yi are associated with dust and gaseous emission from crushing plants. Cumulative impacts associated with other emission sources including industrial sources, marine emissions and vehicular emissions within the study area during the construction and operational phases of the proposed crushing plant are also assessed.

3.2 Environmental Legislation and Guidelines

3.2.1 The air quality impact assessment criteria shall make reference to the requirement on specific process under the Air Pollution Control Ordinance (APCO) (Cap 311) and Annex 4 of the Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM).

Air Quality Objectives

3.2.2 The APCO provides a regulatory framework for controlling air pollutants from a variety of stationary and mobile sources and encompasses a number of Air Quality Objectives (AQOs).

3.2.3 Although the new AQOs came into effect on 1 Jan 2022, there is a transitional arrangement for projects with EP granted before 1 Jan 2022, which the AQOs will not apply to VEP application submitted within 36 months from 1 Jan 2022. The AQOs implemented from 2014 to 2021 is still applicable for this study.

3.2.4 The AQOs stipulate concentrations for a range of pollutants namely sulphur dioxide (SO_2), respirable suspended particulates (PM10), fine suspended particulates (PM2.5), nitrogen dioxide (NO_2), carbon monoxide (CO), photochemical oxidants (as ozone) and lead (Pb). The AQOs (2014) are shown in **Table 3.1**.

Table 3.1 Hong Kong Air Quality Objective Relevant to the Assessment

Pollutant	Averaging Time	Maximum Average Concentration (µg/m^3) (1)	No. of Exceedances Allowed
Fine Suspended Particulates (FSP/$PM_{2.5}$) (3)	24-hour	75	9
	Annual (2)	35	NA
Respirable Suspended Particulates (RSP/PM_{10}) (4)	24-hour	100	9
	Annual	50	NA
Sulphur Dioxide (SO_2)	10-min	500	3
	24-hour	125	3
Nitrogen Dioxide (NO_2)	1-hour	200	18
	Annual	40	NA

Notes:

(1) Measurements of the concentration of gaseous air pollutants, i.e., sulphur dioxide and nitrogen dioxide are to be adjusted to a reference temperature of 293K and a reference pressure of 101.325 kPa.
(2) Arithmetic mean.
(3) Suspended particulates in air with a nominal aerodynamic diameter of 2.5 μm or less.
(4) Suspended particulates in air with a nominal aerodynamic diameter of 10 μm or less.

EIAO-TM

3.2.5 The EIAO-TM stipulates that the hourly TSP level should not exceed 500 $\mu g/m^3$ (measured at 25°C and one atmosphere) for construction dust impact assessment.

Air Pollution Control (Construction Dust) Regulation

3.2.6 The Air Pollution Control (Construction Dust) Regulation specifies processes that require special dust control. The Contractors are required to inform EPD and adopt proper dust suppression measures while carrying out "Notifiable Works" (which requires prior notification by the regulation) and "Regulatory Works" to meet the requirements as defined under the regulation.

Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation

3.2.7 The Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation comes into operation on 1 June 2015. Under the Regulation, non-road mobile machinery (NRMMs), except those exempted, are required to comply with the prescribed emission standards. From 1 September 2015, all regulated machines sold or leased for use in Hong Kong must be approved or exempted with a proper label in a prescribed format issued by EPD. Starting from 1 December 2015, only approved or exempted NRMMs with a proper label are allowed to be used in specified activities and locations including construction sites. In addition to the Regulation, Development Bureau Technical Circular (Works) No. 1/2015 Emissions Control of Non-road mobile Machinery in Capital Works Contracts of Public Works promulgates the requirements for the use of NRMMS approved under the Regulation in new capital works contracts of public works including design and build contracts. The Contractor is required to ensure the adopted machines or non-road vehicle under the Project could meet the prescribed emission standards and requirement.

Air Pollution Control (Fuel Restriction) Regulations

3.2.8 Air Pollution Control (Fuel Restriction) Regulations was enacted in 1990 to impose legal control on the types of fuel allowed for use and their sulphur contents in commercial and industrial processes to reduce sulphur dioxide (SO_2) emissions. In June 2008, the Regulation was amended to tighten the control requirements of liquid fuels. With the exception of Sha Tin district (please refer to the Section on Sha Tin Fuel Restriction Area), only fuels complying with the following respective requirements are permitted to be used: a) gaseous fuel; b) conventional solid fuel with a sulphur content not exceeding 1% by weight; and c) liquid fuel with a

sulphur content not exceeding 0.005% by weight and a viscosity not more than 6 centistokes at 40 ℃, such as Ultra Low Sulphur Diesel (ULSD).

DEVB TC(W) No. 13/2020 - Timely Application of Temporary Electricity and Water Supply for Public Works Contracts and Wider Use of Electric Vehicles in Public Works Contracts

3.2.9 In order to improve roadside air quality from conventional vehicles, and reduce carbon emission and noise pollution arising from the operation of diesel generators at the beginning of the construction works, a wider use of electric vehicles, and timely provision of water supply and electricity are promoted. Electric vehicles have been provided under the main contract of Relocation of Sha Tin Sewage Treatment to Caverns.

Requirement on Specified Process

3.2.10 "A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Mineral Works (Stone Crushing Plants) BPM 11/1 (95)" (BPM) by EPD stipulates the particulates emission concentration limit at 50 mg/m^3 (expressed at reference condition, 0 ℃, 101.325 kPa).

3.3 Description of the Environment

Background Air Quality

3.3.1 As there are no Environmental Protection Department (EPD) Air Quality Monitoring Stations (AQMS) located in Tsing Yi, the nearest EPD AQMS at Princess Alexandra Community Centre, Tsuen Wan has been selected to provide representative background data of the air quality in Tsing Yi. The air quality monitoring data recorded at the monitoring station has shown general improvement trend of pollutant concentrations in the past five years (2016-2020). The air quality was generally acceptable in the past five years, except ambient NO_2 concentration exceeded the annual average standard for 2016 to 2019. The air quality data of the past five years are summarized in **Table 3.2**.

Air Sensitive Receivers

3.3.2 The representative Air Sensitive Receivers (ASRs) have been identified for the air quality impact assessment within a 500m study area from the Project site boundary. The ASRs are detailed in **Table 3.3** below and shown in **Figure 3.1**. All of these representative existing ASRs are in close proximity to the construction site and have the potential to be impacted by the works. The nearest residential receiver is Cheung Wang Estate which is 1.1km away from the proposed rock processing works and located on the other side of the hill, therefore it was not considered in the assessment.

3.4 Identification of Pollutant Sources during Construction Phase of Crushing Plant

3.4.1 Minor construction activity, will be conducted, which involves minor excavation for wheel washing facility. The work area of the wheel washing facility is approximately 13m^2 with depth of 1m. Therefore, the amount of excavated material generated from the proposed work would be considered as minimal. These construction activities may pose potential dust impact on the ambient air, however, which is considered as minor owing to the small scale of work. With the implementation of construction dust mitigation measures as suggested in the Air Pollution Control (Construction Dust) Regulation, no adverse construction dust impact due to the construction of wheel washing facility.

3.4.2 All of the Non-road Mobile Machinery (NRMMs) used for the construction shall comply with the Air Pollution Control (NRMMs) (Emission) Regulation. NRMM used in construction sites shall use diesel with a sulphur content not higher than 0.005% (i.e. ultra-low-sulphur content) as regulated under the Air Pollution Control (Fuel Restriction) Regulations.

3.4.3 There is no concurrent construction project identified in the study area. Therefore, no cumulative air quality impact associated with any concurrent construction projects is anticipated.

3.4.4 With the implementation of sufficient dust suppression measures as stipulated under the APCO, Air Pollution Control (Construction Dust) Regulation, Air Pollution Control (NRMMs) (Emission) Regulation and good site practices, potential dust impacts arising from the construction of the proposed crushing facilities is not anticipated at the ASRs.

3.5 Identification of Pollutant Sources during Operational Phase of Crushing Plant

3.5.1 The proposed rock processing works and its associated logistics will operate during the cavern construction where boulder is generated and required further processing. Under the latest design scheme, the proposed rock processing works in Tsing Yi should be considered as off-site works areas during the cavern construction as compared with the approved EIA. The associated air quality impacts from the rock processing works and the cumulative impacts are detailed below.

Proposed Crushing Plant, Proposed Barging Point, Temporary Stockpiling at Ngau Kok Wan

3.5.2 Particulate emissions, including TSP, RSP and FSP, and gaseous emission including NO_2 and SO_2, would also be generated from (1) truck movements and rock processing inside the proposed site at Ngau Kok Wan; (2) nearby existing road networks, (3) existing Specified Process (SP)/ industrial chimneys; and (4)

emissions from the marine vessels, all of which would contribute to the cumulative impacts.

3.5.3 Ngau Kok Wan receives the excavated rock from Sha Tin, which has been primarily produced by drill and blast inside the cavern to around 600mm in size. There is no crusher in the caverns at Sha Tin. The excavated rock will be further processed at the proposed crushing plant at Ngau Kok Wan. The processed rocks would eventually be transported out of Ngau Kok Wan to the downstream receivers by barges via barging point at Ngau Kok Wan. Potential dust impact is arisen during handling and temporary storage of these boulders. Diesel-generators will be equipped for the crushers, screens and conveyor system at Nagu Kok Wan. Emissions of NO_2 and SO_2 and particulates, due to fuel combustion is expected during the operation at Ngau Kok Wan. Due to such large size of rocks, dust emissions from unloading of rocks from dump trucks to the stockpiling area and from unloading into the feed hopper for rock crushing are considered negligible and is excluded in the cumulative air quality assessment. In order to minimise potential dust emission, the rocks fed into the feed hopper of the primary crusher will be kept in wet condition by water spraying.

3.5.4 Inbound boulder at Ngau Kok Wan is transported by dump trucks. It is to be handled and stored temporarily before rock processing. The product aggregate after crushing, which comprises coarse and fine rocks, is to be handled and stored at the stockpile before delivery to other plants as raw material. Potential dust impact arises from the handling and storage of these boulders and aggregates are anticipated. Appropriate dust suppression measure, such as regular watering on aggregate, shall be provided to minimize the fugitive dust emission during handling and storage.

3.5.5 There will be two production lines proposed to be operating at Ngau Kok Wan. Each production line consists of primary, secondary and tertiary crushers, screens and conveyor system. Mobile crushers, screens and conveyor system will be equipped with diesel-fuelled power generator as power supply. Therefore, gaseous emissions of NO_2, SO_2 and particulates due to fuel combustion is expected during the operation of the crushing plant.

3.5.6 The proposed rock processing activities are considered as major potential dust emission sources in accordance with the specification given in *Compilation of Air Pollutant* Emission *Factors (AP-42), 5th Edition* issued by U.S. Environmental Protection Agency:-

(a) Aggregate handling (Section 13.2.4, AP-42);

(b) Loading of raw material to the crushers and screens (Section 11.19.2, AP-42);

(c) Loading of rock product to stockpile (Section 13.2.4, AP-42);

(d) Loading of rock product to conveyor to subsequent production legs of ready-mix concrete and asphalt concrete (Section 13.2.4, AP-42); and

(e) Paved haul roads with vehicular movement (Section 13.2.1, AP-42).

3.5.7 Best Practicable Means of dust suppression and fugitive emissions control suggested in BPM has been implemented in the design of the proposed crushing plant and the associated equipment. Dust collectors, enclosures and water sprayers are the general measures to control the likely particulate emission due to the transport and handling of aggregates. These would be applied in the emission sources based on the characteristics of the emission points to minimise the impacts. The proposed dust collector (e.g. bag filter) with dust control efficiency can achieve 99.5%. For conservative approach, dust collector with typical dust control efficiency for TSP and RSP at 99.4%, and FSP at 99% is adopted in the model aaccording to Appendix B.2 of USEPA AP-42.

3.5.8 Apart from the best practicable means of dust suppression and fugitive and gaseous emission from the rock crushing facilities, the following mitigation measures have been explored and adopted as far as practicable.

(a) Application of electric power supply was made. Due to the site located at the remote area, the capacity is only sufficient for the container office whereas it may not be able to provide stable power supply for the conveyors and crushing facilities. As such, there is no alternative to use diesel engine for the conveyors and crushing facilities.

(b) Onshore power supply system for barges and use of electric crushing facilities were also considered not feasible for the proposed facilities.

(c) The barge adopted in the project are equipped with main engine only. The main engine will be switched off during the loading and unloading process. However, there are emissions from hotelling of barges at Ngau Kok Wan and concrete batching plant during dropping and raising a barge's anchor. The times are approximately 5 mins for dropping a barge's anchor and 5 mins for raising a barge's anchor every two hours.

3.5.9 Description of the emission points and the corresponding control measures are tabulated in **Table 3.4**.

Induced Marine Emission by Rock Transport

3.5.10 Barges are required to transport the processed rock from Ngau Kok Wan to downstream receivers via barging point at Ngau Kok Wan. According to the rock generation rate estimated by engineers, 12 trips of barges per day are expected. This project induced marine traffic emission would be included in the cumulative impact. Particulates, NO_2 and SO_2 are the major air pollutants associated with the marine emission.

Induced Vehicular Emission by Rock Transport

3.5.11 The excavated rocks will be transported from Sha Tin to Ngau Kok Wan by trucks. A daily maximum of 960 trucks are expected by engineers. This project induced vehicular emission would be included in the cumulative impact. Particulates and NO_2 are the major air pollutants associated with the vehicular emission. In order to minimise the impact arising from the proposed crushing facilities, Euro V or VI dump truck will be adopted in the delivery of rock from Sha Tin to the proposed crushing facilities in Tsing Yi.

Existing Open Road Emission

3.5.12 Vehicular emission from open roads is also a contributor to ambient RSP, FSP and NO_2 concentrations. Major road networks are identified within the 500m study area, including North West Tsing Yi Interchange and Tsing Yi North Coastal Road. These roads also contribute to the cumulative air quality on the study area.

Existing Marine Traffic Emission

3.5.13 There are also existing marine routes located within the 500m study area of Ngau Kok Wan. These existing marine traffics also contribute to the cumulative air quality impact on the study area.

Other Industrial Sources

3.5.14 According to records kept in EPD's Specified Process (SP) Register, there are existing industrial sources within 500m study area. Although those sources are located further away from the propose site, significant emission is anticipated and would contribute to the cumulative air quality impact on the area.

3.5.15 The specified processes operating within the 500m study area are identified which are detailed below:

- Cement Works by Hong Kong Cement Co. Ltd. under SP Licence No. L-3-034(5);
- Cement Works (Concrete Batching Plant) by Quon Hing Concrete Ltd. under SP Licence No. L-3-039(5);
- Cement Works (Concrete Batching Plant) by Shun Shing Fat Ltd. under

SP Licence No. L-3-036(5);

- Cement Works (Concrete Batching Plant) by Hong Kong Concrete Ltd. under SP Licence No. L-3-259(1);

3.6 Assessment Methodology

Emission by Proposed Barging Point

3.6.1 Outbound aggregates (i.e. the processed rock) at Ngau Kok Wan comprises coarse and fine rocks. It is assumed that aggregate of 1000Mg per hour will be handled at the barging point. The dust emission due to the handling of aggregates was estimated in accordance with *USEPA Compilation of Air Pollution Emission Factors (AP-42), 5th Edition*. Detailed calculation of the emission rate is presented in **Appendix 3.1**.

3.6.2 The barging point was assumed to be operating from 07:00 to 19:00, 12 hours a day.

Emission by Proposed Crushing Plant and Temporary Stockpiling

3.6.3 Inbound boulder is to be processed into valuable aggregate in this crushing plant. The product aggregate is to be handled and stored in the stockpile. Two rock crushers are proposed for the rock processing works. Dust generating activities and corresponding dust control measures has been identified in **Table 3.4**. Emission rates by sources are estimated in accordance with the AP-42 and summarized in **Table 3.5**. Detailed calculations of emission rates are presented in **Appendix 3.1**. The spatial distribution of effective dust emission sources is illustrated in the appendix as well.

3.6.4 The proposed crushing plant and the temporary stockpiling was assumed to be operating from 07:00 to 19:00, 12 hours a day. The crushing plant would not be operating during Sundays and public holidays.

Emission Inventory of Other SP Processes

3.6.5 As mentioned in **Section 3.5.15**, several concrete batching plants are the contributing emission sources to the ambient air quality in the study area. The cumulative air quality impact due to the operation of these plants were also considered in the assessment. The information including valid emission strength, corresponding dust control measures of emission sources and their emission duration of these plant operations were extracted from the SP Licence Registry where applicable and taken into account in this assessment. Based on the available information, emissions from these SP processes have been considered in the cumulative air quality impact assessment. Spatial distributions of these adjacent emission sources and their details are illustrated in **Appendix 3.3**.

Vehicular Emission from Open Roads

3.6.6 The proposed rock processing works and its associated logistics is proposed to commence in mid-2022. According to the latest development of the Project, the rock excavation is expected to attain the highest from early Year 2023 to end of Year 2024, as well as the rock processing demand based on engineering assumption. Year 2023 / 2024 traffic forecast for Tsing Yi was then adopted for calculation because of the highest operation demand. The traffic induced by the proposed rock processing works was included in the traffic forecasts.

3.6.7 The traffic forecasts were submitted to Transport Department (TD). TD has no comment from a traffic engineering point of view on traffic data. The traffic data for each road within the 500m study area, including 24-hr traffic flow with vehicle percentage, travelling speed in 18 types of vehicle is presented in **Appendix 3.4**. The vehicular emission factor for Year 2023 and Year 2024 was extracted from EMFAC-HK v.4.3 in EMFAC mode with the representative data for temperature and relative humidity recorded at Tsing Yi Weather Station in Year 2020 obtained from Hong Kong Observatory. The detailed calculation of vehicular emission source is presented in **Appendix 3.5**.

Marine Emission

3.6.8 As discussed in **Section 3.5.10**, 12 trips of barge per day is expected based on the rock generation forecast. The operation hour of the barge was assumed typically 07:00 – 19:00, 12 hours a day. As confirmed by the contractor, there will be a trip of barge per hour. The barging facilities would not be operating during Sundays and public holidays.

3.6.9 The vessel count survey results for existing marine traffic flows reported in the Study for Sha Tin Cavern – Quarry Delivery: Data For Emission Study (MTIA) were adopted to assess the potential air quality impact by existing marine traffic. The MTIA was reviewed by Marine Department and no more comment was received from the department. The marine data adopted is presented in **Appendix 3.6**.

3.6.10 According to MTIA, 176 vessels transits daily within the 500m buffer area from proposed barging point of Ngau Kok Wan. The major vessels that transits the area are cargo vessels (74 daily for Ngau Kok Wan) and tanker vessels (26 daily for Ngau Kok Wan). Other vessels that transits the area includes conventional ferries, fast ferries, tugs and tows, fishing and pleasure vessels.

3.6.11 With reference to the Study on Marine Vessels Emission Inventory (MVEIS) by the HKUST, the marine emissions are estimated based on an activity-based approach. The emission factors in this Study were derived in units of works (gram per kilowatt-hour), dependent on the fractional loading of the equipment during different vessel activity modes.

3.6.12 The calculation can be summarized as below:

$$Emission = P \times FL \times T \times EF$$

where P is the installed power of equipment;
FL is fractional load of equipment in a specific mode;
T is operation time-in-mode; and
EF is fractional load emission factor of equipment

3.6.13 The vessel types adopted in the MTIA were matched with equivalent vessel types considered in MVEIS. Typical engine power rating, engine type, fuel type of each vessel type were adopted from MVEIS. A summary of adopted vessel information is presented in **Table 3.6**. Detailed assumptions are discussed in **Appendix 3.6**.

3.6.14 In addition, the typical power equipment installed on marine vessels including Main Engine (ME) for propulsion, Auxiliary Engine (AE) for electricity and Auxiliary Boiler (AB) for fuel pre-heating and pumping would be adopted in the assessment. Subject to the vessel types, different combinations of engines are equipped on a vessel. For example, all 3 kinds of engines are equipped on fully cellular container vessel, no ME for barge, and no AB for pleasure vessel.

3.6.15 According to the Air Pollution Control (Fuel for Vessels) Regulation, all local vessels except for specified vessel types, are required to use compliant fuel with sulphur content of 0.05% within Hong Kong waters, irrespective of whether they are sailing or berthing. The SO_2 emission factors from MVEIS were further adjusted to sulphur content of 0.05%, for example MGO in MVEIS at sulphur content of 0.5%, and are presented in **Appendix 3.6**. Fuel type assumed for each vessel type is presented in **Table 3.6**.

3.6.16 With referent to MVEIS, operation modes of vessel activity were determined based on the vessel speed. The operation mode definition by vessel speed is summarized in **Table 3.7**. The determination of operation mode at each marine source is discussed in **Appendix 3.6.**

Table 3.7 Operation Mode Definition by Vessel Speed

Operation Mode	Vessel Speed

Slow Cruise	8 – 12 knots
Maneuvering	1 to 8 knots
Hotelling	Below 1 knot

3.6.17 Typical engine load factor by vessel type and by operation mode refers to MVEIS. Engine load factor of marine source was then determined according to its vessel type and its operation mode. Detailed determination of engine load factor is discussed in **Appendix 3.6**.

3.6.18 The time-in-mode was estimated by the distance and vessel speed travelled in the corresponding mode. The time-in-mode of marine sources are presented in **Appendix 3.6**.

3.6.19 Emission factors of SO_2, NO_X, RSP and FSP by vessel type and by operation mode referred to MVEIS. Together with the parameters discussed above, emission of a marine source was estimated with the equation discussed in Section 3.5.13. Detailed calculations of marine emission rates are derived in **Appendix 3.6**. TSP Emission Rates are assumed to be equal to RSP Emission Rates. The predicted RSP concentrations were directly adopted in the calculation of cumulative hourly average TSP.

3.6.20 Marine vessel emissions have been modelled as numerous point sources along the marine routes due to their high exhaust temperatures, exhaust velocities and high release heights. The dispersion model AERMOD has been used for assessing the air pollutants concentrations of the exhaust emission of vessel engines.

3.6.21 For specific vessels previously studied in the approved EIA, e.g. approved EIA report of Lei Yue Mun Waterfront Enhancement Project (Register No: AEIAR-219/2018), their stack parameters were extracted and adopted for the relevant types in the assessment. Stack parameters, namely stack height, exit temperature, exit velocity, stack diameter and effective diameter, adopted for each vessel type are summarized in **Appendix 3.6**.

3.6.22 Moreover, fishing vessels, pleasure vessels, government vessels (mostly patrol boats) and others (mostly tugboats) generally equips with horizontal stack. These vessels were therefore modelled as point source with horizontal release in air dispersion model.

Dispersion Modelling and Modelling Approach

3.6.23 According to Guidelines on Assessing the 'TOTAL' Air Quality Impacts by EPD, an integrated modelling system PATH v2.1 which is developed and maintained by EPD was applied to provide background pollutant concentrations in assessing the total impact in the study area. The PATH concentration at Level 1 of the PATH grids, where the identified ASRs are located in is presented in **Table 3.8**.

Notes:
[1] Values in ( ) mean the number of exceedances allowed per year.
[2] Annual FSP concentration is adjusted by adding 3.5 μg/m^3 with reference to Guidelines on Choice of Models and Model Parameters.

[3] 10th highest daily and annual RSP concentration is adjusted by adding 11.0 μg/m^3 and 10.3 μg/m^3 respectively with reference to Guidelines on Choice of Models and Model Parameters. Same adjustment is applied to estimation of $PM_{2.5}$ as well.

[4] The NO2 concentrations in 2023 are from the re-run PATH output, while the NO2 concentrations in 2024 are from standard PATH output.

3.6.24 According to the results presented in **Appendix 3.5**, 2023 NOx emission factors and 2024 PM emission factors for open road traffic will be adopted in the model to demonstrate the worst case scenario.

3.6.25 The air dispersion model, American Meteorological Society (AMS) and U.S. Environmental Protection Agency (EPA) Regulatory Model (AERMOD), which is widely adopted in environmental studies and approved by EPD has been adopted to predict the air quality impacts at the representative ASRs due to the proposed rock processing works. The concerned pollutants including hourly average of TSP, daily and annual averages of RSP and FSP, hourly and annual averages of NO_2, 10-min and daily average of SO_2 concentrations are predicted at each identified ASRs at various assessment height, ranging from 1.5 metres to 10 metres above ground based on the different elevation of the identified ASRs.

3.6.26 Hourly meteorological conditions including wind data, temperature, relative humidity, pressure, cloud cover and mixing height of Year 2015 are extracted from the WRF meteorological data adopted in the PATH v2.1 system. The dataset by WRF should be intact and consistent among parameters.

3.6.27 The wind speed and mixing heights in the WRF data will be further adjusted before meteorological pre-processing by AERMET. The minimum wind speed is capped at 1 metre per second. The mixing height is capped between 131 metres and 1,941 metres according to the observation in Year 2015 by HKO. After pre-processed by AERMET, the mixing height is verified once again and adjusted to the capped range if necessary.

3.6.28 Surface characteristic parameters such as albedo, Bowen ratio and surface roughness are required in the AERMET (the meteorological pre-processor of AERMOD). In accordance with USEPA's AERMOD Implementation Guide, albedo and Bowen ratio should be determined by 10km by 10km region. The parameters were determined according to the latest AERMOD Implementation Guide. The details of estimation are presented in **Appendix 3.2**. Flat and Elevated terrain in AERMOD was adopted for this assessment.

3.6.29 Furthermore, dry deposition is applied in the model run. Particle size distribution is assigned for particles with aerodynamic diameters smaller than 10 μm to each type of source in the AERMOD in order to account for the particle deposition. Method 1 is used when a significant fraction (greater than 10 percent) of the total particulate mass has a diameter of 10 microns or larger. The particle size distribution must be known reasonably well in order to use Method 1. The sources are divided into five types, (i) general rock processing, (ii) aggregate handling and storage piles, (iii) general concrete batching process (further classified into 4

different processes as described in **Table 3.10**), (iv) fugitive emission from paved roads and (v) industrial boiler and (vii) industrial processes of asphalt production.

3.6.30 The particle size distributions for each type of source are summarized in **Table 3.9 - Table 3.12**. Details are presented in **Appendix 3.1** and **Appendix 3.3**. Method 1 of particle dry deposition was applied for the TSP and RSP prediction for processes such as aggregate handling and storage piles, fugitive emission from paved roads, and industrial boiler and industrial processes of asphalt production. According to **Table 3.9 - Table 3.12**, the size distribution of particles are known based on the USEPA AP-42.

3.6.31 Another air dispersion model, CALINE4 developed by the California Department of Transport, which is also widely adopted in environmental studies and approved by EPD has been adopted to predict the secondary contribution due to vehicular emission from road networks within 500m study area at the representative ASRs.

3.6.32 The surface roughness is dependent on the land use characteristics, which is estimated to be 10% of average height of physical structure within 1 km radius of the Subject Site. Typically, the value is assumed to be 370 cm and 100 cm for urban and new development respectively. As around 50% of the area of 3km from the project site boundary is occupied by industrial and residential buildings, surface roughness of 370 cm was assumed.

3.6.33 Under the current EPD guideline, the hourly meteorological data including wind speed, wind direction, and air temperature of the relevant grids from the WRF Meteorological data (same basis for PATH v2.1 model), were employed for the model run. PCRAMMET was applied to generate Pasquill-Gifford stability class for the meteorological input to CALINE4 model based on the WRF meteorological data.

3.6.34 Owing to the limitation of CALINE4 model, road elevation is limited to 10 metres above or 10 metres below the datum. As the road height within the assessment area ranged from 5.0 mPD to 78.7 mPD, road height in CALINE4 Model were handled based on the ground levels of ASRs.

3.6.35 For short-term total NO_2 concentration, Ozone Limiting Method (OLM) has been adopted for the conversion of NOx to NO_2 based on the ozone background concentration from PATH v2.1.

3.6.36 NO2-to-NOX ratio of 10% for was applied to marine diesel engines, boilers and on-site generators.

$$[NO_2]_{predicted} = f_{NO2\text{-}to\text{-}NOX} \times [NO_X]_{predicted} + MIN \{(1 - f_{NO2\text{-}to\text{-}NOX}) \times [NO_X]_{predicted}, \text{ or } (46/48) \times [O_3]_{PATH}\}$$

where

$f_{NO2\text{-}to\text{-}NOX}$	is the NO_2-to-NO_X ratio
$[NO_2]_{predicted}$	is the predicted NO_2 concentration
$[NO_X]_{predicted}$	is the predicted NO_X concentration
MIN	means the minimum of the two values within the bracket
$[O_3]_{PATH}$	is the representative O_3 PATH concentration (from other contribution)
(46/48)	is the molecular weight of NO_2 divided by the molecular weight of O_3

3.6.37 For vehicular emission, NO_2 and NO will be predicted separately in CALINE4. The total predicted vehicular NO_2 will be estimated according to following principle of OLM:

$$[NO_2]_{vehicular} = [NO_2]_{predicted} + MIN \{[NO]_{predicted}, \text{ or } (46/48) \times [O_3]_{PATH}\}$$

where

$[NO_2]_{predicted}$	is the predicted NO_2 concentration
$[NO]_{predicted}$	is the predicted NO_X concentration
MIN	means the minimum of the two values within the bracket
$[O_3]_{PATH}$	is the representative O_3 PATH concentration (from other contribution)
(46/48)	is the molecular weight of NO_2 divided by the molecular weight of O_3

3.6.38 For long-term total NO_2 concentration, Jenkin method was adopted for the conversion of cumulative NOx to NO_2 with reference to the *Review of methods for NO to NO_2 Conversion in plumes at short ranges* published by Environment Agency, UK. The use of project specific empirical relationship and the calculation details has been presented in **Appendix 3.7**.

3.6.39 According to "*Guidelines on the Estimation of 10-min average SO_2 Concentration for Air Quality Assessment in Hong Kong*", SO_2 concentration in 10-min average due to the marine emission and industrial emission is estimated by applying stability-dependent multiplicative factor to 1-hour average model prediction by AERMOD. In accordance with the EPD's "Guidelines on the Estimation of 10-minute Average SO_2 Concentration for Air Quality Assessment in Hong Kong", the stability-dependent multiplicative factors for obtaining all 10-minute averaged concentration from hour-by hour SO_2 concentration are extracted and summarised in **Table 3.13**.

Stability Class	Conversion Factor
A	2.45
B	2.45
C	1.82

F	1.35

3.6.40 As mentioned in **Section 3.6.23**, PATH v2.1 was adopted to project future regional background air quality. All the major emission sources and meteorological information in Hong Kong, the PRD Region and other Mainland areas outside the PRD region have been included in PATH model. Detailed emission sources adopted in the PATH model can be found in items v and vii of EPD's Guidelines for Local-Scale Air Quality Assessment Using Models. As there are several ASRs identified nearby roads with heavy traffic, such as Lantau Link Tsing Long Highway, Tsing Sha Highway, etc., NO_2 emissions from vehicles have greater impact on roadside air quality as well as nearby ASRs.

3.6.41 In order to avoid double-counting of vehicle emission from open roads, the background vehicle emission of NO_2 within the assessment area of 500 meters from the Project accounted in CALINE4 of Tier 2 assessment are removed from the relevant grids including (30, 37), (31, 37), (31, 38) and (32, 38) of PATH v2.1 for Year 2023. The PATH model was re-run and the re-simulated hourly background concentrations of NO_2 have been adopted in the cumulative air quality impact assessment.

3.6.42 Cumulative air pollutant concentration at ASRs were derived from the sum of predictions by local air quality models, AERMOD and CALINE4, and background concentration from PATH v2.1 system on hour-by-hour basis. The air quality impact on ASRs is evaluated by number of exceedance per annum against the AQO criteria.

3.7 Prediction and Evaluation of Impact

Cumulative Air Quality Impact

3.7.1 The highest cumulative hourly average of TSP, the 10th highest cumulative daily and annual averages of RSP and FSP, the 19th highest cumulative hourly and annual averages of NO_2, and the 4th highest cumulative 10-min and the 4th highest daily averages of SO_2 concentrations at each ASR are presented in **Table 3.14** and **Table 3.15**.

3.7.2 The prediction showed that daily and annual RSP, daily and annual FSP, hourly NO_2 concentration, 10-min and daily SO_2 concentrations would comply with the relevant AQOs. The annual NO_2 concentration at ASR A51 would comply with

the relevant AQO, while annual NO_2 concentration at ASRs A52 and A55 would fail to comply with the relevant AQO. Detailed breakdown of source contribution is presented in **Appendix 3.7**. **Figures 3.2** to **3.10** present the contour plotting of the cumulative impacts at the worst assessment height. With reference to the contour plots of the highest hourly TSP and 19th hourly NO_2, there is no air sensitive use situated within the exceedance zone. No exceedance zone was identified in the contour plots of 10th daily and annual RSP, 10th daily and annual FSP, and 10-min and 4th daily SO_2. Air sensitive uses within the exceedance zone of annual NO_2 will be provided with appropriate mitigation measures to reduce the annual NO_2 concentration to the accepted level.

3.8 Mitigation of Adverse Environmental Impacts

3.8.1 Based on the prediction, ASRs A52 and A55 generally suffer from high NO_2 background concentration. Assessment points were selected at the locations, which were the closest to the concerned road segments (i.e. with the heaviest traffic flow). As such, the selected assessment points are the worst-case scenario to represent the impacts at particular ASRs. ASR A52 at workshop is a representative assessment point of workshop and workshop office, while ASR A55 at visitor centre is a representative assessment point of visitor center, café and model shop. The concerned pollutant concentration levels of workshop office, café and model shop have been presented in **Figures 3.2** to **3.10**. As shown in **Table**

3.16, the 19th highest hourly NO_2 and annual NO_2 assessment results at Nans café and model shop are lower than the concentrations predicted at the visitor center while the NO_2 assessment results at the workshop office are lower than those at the maintenance workshop, hence the identified ASRs A52 and A55 can represent the worst hit points of these two groups of ASRs respectively.

3.8.2 A preliminary survey is conducted to identify the possible and feasible mitigation measures to remove air pollutants from air, in particular NO2, in order to safeguard air sensitive use from adverse ambient air quality. The survey results reveal that ASR A55 represents three sensitive uses of Lantau Link Visitors Centre, Nana Cafe & Model Train Shop which all are one-storey building and installed with domestic air conditioners.

3.8.3 ASR A52 represents three sensitive uses of a row of maintenance workshop, one workshop office and one kiosk. The maintenance workshop is connected to the workshop office and the kiosk is located outside the maintenance workshop. Based on site observation, the staff will stay in the workshop office and carry out the maintenance work as required. As such, long-term AQO is not applicable to the Maintenance Workshop and Kiosk of ASR52. This maintenance workshop is in natural ventilation with neither Mechanical Ventilation and Air Conditioning (MVAC) installation nor air conditioner equipped. The workshop office is equipped with split type air-conditioning. No staff will be staying in the kiosk. These findings are summarized in **Table 3.17** and details of site observations are given in **Appendix 3.8A**.

Table 3.17 Summary of Affected Air Sensitive Receivers

ASR	Description	Land Use	Sensitive Area	Duration of Occupation	Long-term AQO	Confined Area?	Type of Ventilation System	Location of Fresh Air Intake
A52	North West Tsing Yi Interchange Vehicle Maintenance Workshops	Workshops	Maintenance Workshop	Based on site observation, the workshop staff will stay in the workshop office and carry out the maintenance work as required. It is considered as staff inside the workshop is transient receiver. Hence, the annual NO_2 air quality objective is not applicable.	Not Applicable	Natural ventilation was provided for the workshops. Roller shutter was opened under operation.	Natural Ventilation	No fresh air intake and no openable window for fresh air intake or ventilation
			Workshop Office	Based on site observation, the workshop staff will stay in the workshop office and carry out the maintenance work as required. It is considered the staff inside the workshop office is long term sensitive receivers.	Applicable	Yes	Split Type Air Conditioning System	
			Kiosk	Based on the site observation, no staff will be staying in the kiosk. Hence, the hourly and annual NO_2 air quality objective is not applicable.	Not Applicable	No	Natural Ventilation	

ASR	Description	Land Use	Sensitive Area	Duration of Occupation	Long-term AQO	Confined Area?	Type of Ventilation System	Location of Fresh Air Intake
A55	Lantau Link Visitors Centre, Nana Café & Model Train Shop	Recreational (Open at 10am to 5pm for Monday to Friday and Open at 10am to 6.30pm for Saturday, Sunday and Public Holiday)	Lantau Link Visitors Centre	Long term for staff but transient use for visitors.	Applicable	Yes	Split Type Air Conditioning System	No fresh air intake and no openable window for fresh air intake or ventilation
			Nana Café		Applicable	Yes	Window Type Air Conditioning System	
			Model Train Shop		Applicable	Yes	Split Type Air Conditioning System	

3.8.4 APS for fresh air intake would also not be feasible at ASRs A52 and A55 because there is no fresh air intake as summarized in **Table 3.18** below.

Table 3.18 Analysis of APS at Fresh Air Intake vs Portable Air Purifier

Affected ASR	Type of existing MVAC system	Feasibility of APS at Fresh Air Intake	Feasibility of Portable Air Purifier
A52 – North West Tsing Yi Interchange Maintenance Workshops & Workshop Office	Split type AC system at workshop office	Technically infeasible to install APS due to no fresh air intake.	Feasible
A55 – Lantau Link Visitor Centre, Nana Café & Model Train Shop	Split type AC system for Visitor Centre	Technically infeasible to install APS due to no fresh air intake.	Feasible
	Window type AC system for Nana Café		
	Split type AC system for Model Train Shop		

3.8.5 It is understood that there are commercially available Portable Air Purifier in the market, which could have 92% NO_2 removal efficiency. The catalogue of Nano Confined Catalytic Oxidizer (NCCO) is attached in **Appendix 3.8B**. It is an innovative technology invented by member of HKUST entrepreneurship program. The laboratory test results for proving the removal efficiency is given in **Appendix 3.8C**). According to the information provided by the supplier, a job reference for a fitness center with the installation of the portable air purifier using the NCCO technology, the indoor NO_2 concentration could reduce from range of 67 – 103 ug/m^3 to <40 ug/m^3 (corresponding to an NO2 removal efficiency range of 40-60%), i.e. achieving the Excellent Class of Indoor Air Quality Objective issued by EPD. Sample calculation of the air exchange rate and the indoor air quality with the installation of portable air purifier is shown in **Appendix 3.8D**. However, variation in removal efficiency is also expected when Portable Air Purifier is operating in different conditions and environment (i.e. room size, fresh air change rate, etc.). In this connection, a conservative calculation method is adopted and shown in **Appendix 3.8D**, in which NO2 removal efficiency of 60% is adopted in the consideration of the number of portable air purifier required for each ASRs.

3.8.6 The Portable Air Purifier is a feasible option to improve the indoor air quality. On the other hand, it is simple for installation by just plug-and-play, with no alternation to the existing complicated MVAC system. The Portable Air Purifier has disinfection function which would be easier to be accepted by stakeholders. Two models of portable air purifier (EC920 and BM150) with the adoption of NCCO are proposed for the affected sensitive area. The product catalogues are shown in **Appendix 3.8B**.

3.8.7 A detailed implementation plan of the Portable Air Purifier installation at A52 and A55 is developed on the basis of the specification of different models of the Portable Air Purifiers as stated in **Appendix 3.8B**. **Table 3.19** below shows the number of portable air purifier proposed at the affect sensitive area of ASR A52 and ASR A55 with detailed design calculations are given in **Appendix 3.8E**.

Table 3.19 Proposed number of portable air purifier

Affected ASR	Affected Sensitive Area	Number of Portable Air Purifier	Proposed Air Purifier Model
A52 – North West Tsing Yi Interchange Maintenance Workshops	Workshop Office	2	2 x EC920
Total		**2**	
A55 – Lantau Link Visitors Centre, Viewing Platform & Model Train Shop	Lantau Link Visitors Centre	4	3 x EC920 1 x BM150
	Nana Café	1	1 x EC920
	Model Train Shop	3	3 x EC920
Total		**8**	

3.8.8 In order to verify the performance of the proposed Portable Air Purifier, commissioning test will be conducted. The relevant Implementation Plan, Commissioning Test Plan, Performance Test Plan, Maintenance and Contingency Plan for the proposed Portable Air Purifiers, together with a Responsibilities Matric showing the responsible parties for executing these Plans, are developed and given in **Appendix 3.8E.** Consent on the installation of portable air purifier from HAD for ASR 52 and TD for A55 have been obtained and shown in **Appendix 3.8F**.

3.8.9 According to the information given in the manufacturer's product catalogue (**Appendix 3.8B**) and subsequent confirmation from the manufacturer (**Appendix 3.8G**), the service life of NCCO filter can last up to 12 years but it is suggested to replace NCCO filer every 3 years while the HEPA filter should be replaced every 6 months based on the actual indoor conditions of the ASRs.

3.9 Good Site Practices

3.9.1 In addition to the proposed off-site mitigation measure of installation of portable air purifiers at the sensitive receivers, the contractor would also incorporate the following good site practices in order to further minimise the impact from the proposed rock processing plant.

- Adequate training will be given to the personnel for inspection and maintenance of all the air pollution control equipment. This includes the standard operation and maintenance procedures to be carried out by the operation staff to keep all the air pollution control equipment in good operating condition.

- Loading, unloading, handling and storage of raw materials, products, wastes or by-products should be carried out in an acceptable manner so as to minimize dust emission impact on the surrounding environment.

- All sprinkler system used for dust suppression shall be maintained in good condition during operation. The flow rate and operating pressure of the spraying liquid/solution shall be sufficient to suppress dust emission from the corresponding sources. The sprinkler system shall be able to cover the areas of emission points concerned.

- Air pollution control equipment, such as dust collector, shall be maintained in good operation condition and put into use whenever the relevant plant served by the air control equipment is in operation.

- The dust extraction and collection system shall be routinely inspected at least once per month. This system shall be maintained in good condition during production. Collected dust will be returned to process stream or disposed of without generating any fugitive dust.

- The maintenance, repair, or general cleaning of the plant facilities and vehicle within the site boundary shall be carried out in such a manner that the emission of fugitive dust is minimized.

- The plant operator shall take all practical measures to minimize dust emissions which may be caused by handling the muddy waste generated from the plant operation. No accumulation and dumping of such waste are allowed in open area.

- Malfunction or breakdown of equipment leading to abnormal emission shall be dealt with promptly. In any case, the abnormal emission due to equipment failure shall be stopped as soon as possible. Sufficient numbers of spare parts for air pollution control equipment shall be kept in stock to allow rapid repair of the equipment. Each fabric filter is inspected at least once per month.

3.9.2 Together with proper operation and maintenance practices discussed above, the proposed measures should be able to minimize the impact due to the operation of the rock processing works to an acceptable level.

3.9.3 The rock crushing plant is a Specified Process defined under the APCO, a licence from EPD will be applied where the detailed design of plant and mitigation proposals will be formulated to ensure full compliance with relevant requirements under the APCO during operation.

3.10 Evaluation of Residue Impacts

3.10.1 With the implementation of off-site measure such as air pollutant filtering system at the affected air sensitive use, control technologies incorporated in the crushing plant and good site practice, no adverse residue impacts would be expected from the operation of proposed rock processing works and associated logistics.

3.11 Environmental Monitoring and Audit

3.11.1 With the implementation of the proposed mitigation measures, identified impact would be minimised to acceptable levels during the operation of the rock processing plant and associated logistics.

3.11.2 The Air Purifiers would be commissioned as per the Commissioning Test Plan described under **Appendix 3.8E**. To guarantee the desired performance, the removal efficiency of NO2 would be checked under the Commissioning Test Plan, and its performance would be checked under the Performance Test Plan on monthly basis by the Environmental Team set out in **Appendix 3.8E**.

3.11.3 In view of the predicted high TSP concentration at ASR 51, a supplement EM&A monitoring point at ASR51 for TSP monitoring during the operation of the rock crushing facilities would be implemented under the following requirements:

(a) Proposed Location: at ASR 51 (exact location to be determined on site);

(b) Parameters: 1-hours Total Suspended Particulates (TSP)

(c) Carry out Baseline Air Quality Monitoring following the existing EM&A Manual Clause 2.2.5.

  (i) 14 consecutive days prior to the commissioning of the rock crushing;

  (ii) 1-hour sampling at least three times per day at each monitoring station.

(d) Carry out Impact Air Quality Monitoring following the existing EM&A Manual Clause 2.2.6.

(e) 1-hour sampling at least three times in every six-days.

(f) It is acceptable to use Direct Reading Dust Meter in lieu of "High Volume Sampler (HVS) method" as described in the Environmental Team's submission titled "Proposal for using Direct Reading Dust meter for Construction Phase Air Monitoring under EP Condition 3.1.

4 WATER QUALITY

4.1 Introduction

4.1.1 This section presents a water quality impact assessment for the proposed works. Mitigation measures have been recommended to mitigate the potential impacts where necessary.

4.2 Environmental Legislation and Guidelines

General

4.2.1 The assessment has made reference to the EIAO-TM Annexes 6 and 14, which set out the criteria and guidelines for evaluating water quality impacts. The following legislation is also relevant to the water quality assessment of this Project:

- Environmental Impact Assessment Ordinance (Cap. 499); and
- Water Pollution Control Ordinance (Cap 358).

4.2.2 Other relevant guidelines include:

- Water Supplies Department (WSD) Water Quality Criteria;
- Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters;
- Practice Note for Professional Persons on Construction Site Drainage (ProPECC PN 1/94);
- Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes;
- Sewerage Manual (SM) and the Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning (GESF); and
- Practice Note for Professional Persons on Drainage Plan (ProPECC PN 5/93).

Water Pollution Control Ordinance

4.2.3 The Water Pollution Control Ordinance (WPCO) (Cap 358) enacted in 1980 is the principal legislation to protect the water quality in Hong Kong. Under the WPCO, the Hong Kong waters are classified into 10 Water Control Zones (WCZs), within which the Water Quality Objectives (WQOs) are specified. WQOs establish limits for different parameters to be achieved in order to maintain the water quality inside the WCZs. The Project Site is located within the Western Buffer WCZ and the relevant WQOs are summarised in **Table 4.1**.

Table 4.1 Summary of WQOs for Western Buffer WCZ

Parameters	WQOs	Sub-Zone
Aesthetic Appearance	There should be no objectionable odours or discolouration of the water. Tarry residues, floating wood, articles made of glass, plastic, rubber or of any other substances should be absent. Mineral oil should not be visible on the surface. Surfactants should not give rise to a lasting foam. There should be no recognisable sewage-derived debris. Floating, submerged and semi-submerged objects of a size likely to interfere with the free movement of vessels or cause damage to vessels should be absent. The waters should not contain substances which settle to form objectionable deposits.	Whole zone
Colour	Human activity should not cause the colour of water to exceed 50 Hazen units.	Other inland waters
Dissolved Oxygen	Bottom: Not less than 2 mg/L for 90% samples Depth-averaged: Not less than 4 mg/L for 90% of samples	Marine waters excepting Fish Culture Subzones
	Bottom: Not less than 2 mg/L for 90% samples Depth- averaged: Not less than 5 mg/L for 90% samples	Fish Culture Subzones
	Not less than 4 mg/L	Other inland waters
Nutrients	Annual mean depth-averaged total inorganic nitrogen not to exceed 0.4 mg/L	Marine Waters
Unionised ammonia (UIA)	Annual mean not to exceed 0.021 mg/L	Whole zone
E. coli	Annual geometric mean not exceed 610 per 100 mL	Secondary contact recreation subzone, fish culture subzones
	Geometric mean of 5 consecutive samples taken at 7-21 days intervals Not exceed 1000 per 100 mL	Other inland waters
pH	To be in the range of 6.5-8.5, change due to waste discharges not to exceed 0.2	Marine Waters
	Human activity should not cause the pH of the water to exceed the range of 6.0–9.0 units	Other inland waters
Salinity	Change due to waste discharges not to exceed 10% of ambient	Whole zone
Temperature	Change due to human activity not to exceed 2°C	Whole zone
Suspended solids (SS)	Waste discharge not to raise the natural ambient level by 30% nor cause the accumulation of suspended solids which may adversely affect aquatic communities	Marine Waters

Parameters	WQOs	Sub-Zone
	Human activity should not cause the annual median of suspended solids to exceed 25 mg/L.	Other inland waters
5-Day Biochemical Oxygen Demand (BOD5)	Not exceed 5 mg/L	Other inland waters
Chemical Oxygen Demand (COD)	Not exceed 30 mg/L	Other inland waters
Toxicants	Not to be present at levels producing significant toxic effect	Whole zone
Turbidity	Waste discharges should not reduce light transmission substantially from the normal level.	Bathing beach subzones

Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters

4.2.4 Besides setting the WQOs, the WPCO controls effluent discharge into the WCZs through a licensing system. The guidance on permissible effluent discharges based on the type of receiving waters (foul sewers, inland/coastal/inshore/marine waters) is provided in the Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters. The limits were given in this Technical Memorandum cover the physical, chemical and microbial quality of effluents. Any effluent discharge during the construction and operation phases should comply with the standards for effluents discharged into foul sewers or inland/inshore/marine waters of the Western.

Water Supplies Department (WSD) Water Quality Criteria

4.2.5 Besides the WQOs set under the WPCO, WSD also specified a set of seawater quality objectives for water quality at their flushing water intakes as shown in **Table 4.2**.

Table 4.2 WSD Standards at Flushing Water Intakes

Parameter (mg/L, unless otherwise stated)	WSD Target Limit
Colour (Hazen Unit)	< 20
Turbidity (NTU)	< 10
Threshold Odour Number (odour unit)	< 100
Ammonia Nitrogen (NH_3-N)	< 1
Suspended Solids (SS)	< 10
Dissolved Oxygen (DO)	> 2
Biochemical Oxygen Demand (BOD)	< 10
Synthetic Detergents	< 5

Parameter (mg/L, unless otherwise stated)	WSD Target Limit
E.coli (cfu per 100 ml)	< 20,000

ProPECC Practice Note on Construction Site Drainage

4.2.6 The Practice Note for Professional Persons on Construction Site Drainage (ProPECC PN 1/94) was issued by the EPD to provide environmental guidelines for handling and disposal of construction site discharges. It provides good practice guidelines for dealing with various types of discharge from a construction site. Practices as outlined in the ProPECC PN 1/94 should be followed during the construction phase in order to minimise the water quality impact due to construction site drainage. Other ProPECC Notes including the ProPECC PN 5/93 Drainage Plan would also be considered if necessary.

4.3 Assessment Methodology

4.3.1 Reference to the criteria and guidelines for assessing water quality impacts as stated in Annexes 6 and 14 of the EIAO-TM has been made.

4.3.2 The construction activities of the Project have been reviewed to identify any potential impacts on the adjacent marine environment, drainage systems, groundwater hydrology and/or catchment types or areas.

4.3.3 Relevant mitigation measures will be proposed when necessarily in order to ensure any water quality impacts would be controlled to acceptable levels.

4.4 Identification of Sensitive Receivers

4.4.1 The study area is 500m from the boundary of Ngau Kok Wan, covering the Western Buffer WCZ as designated under the WPCO. The closest water sensitive receiver identified would be the following and indicated in **Figure 4.1**:

- Inland watercourses;
- WSD flushing water intakes;
- Gazetted beaches; and
- Ma Wan fish culture zone.

4.5 Identification of Pollution Sources

Construction Phase

Construction of Rock Crushing Facilities and Barging Points

4.5.1 The proposed rock processing works requires construction of rock crushing facilities at Ngau Kok Wan and barging points at Ngau Kok Wan. The excavated rocks will be transported from Sha Tin to Ngau Kok Wan by trucks and then delivered to downstream receivers by barge via marine route.

4.5.2 The potential water quality impact associated with construction of the proposed rock crushing facilities at Ngau Kok Wan and barging point at Ngau Kok Wan as described in **Section 4.4.1** would primary be land-based. No marine dredging work is required for the construction works. Potential sources of water quality impact associated with the land-based construction works were identified as follow:

- General construction activities;
- Construction site run-off;

- Accidental spillage and potential contamination of surface water and groundwater;

- Sewage effluent from construction workforce; and

- Construction works in close proximity of inland water.

4.5.3 The evaluation of potential water quality impact associated with land-based construction works for the proposed rock crushing facilities and barging point are same as that stated in Section 5.7.1.1 to 5.7.1.7 of the approved EIA Report. With implementation of mitigation measures for land-based construction as recommended in Section 5.7.2.1 to 5.7.2.20 of the approved EIA Report, no adverse water quality impact is anticipated.

Operation Phase

Barge Operation

4.5.4 Barge operation would have the potential for the following discharges:

- Uncontaminated deck drainage;

- Potential contaminated drainage from machinery spaces; and

- Sewage/grey water.

4.5.5 Deck drainage is likely to be uncontaminated and is not likely to impact water quality. Other sources of possible impacts to water quality may arise from discharges of hydrocarbons (oil and grease) from machinery space drainage and biochemical oxygen demand (BOD) and microbiological constituents associated with sewage/grey water. All vessels should follow the "*International Convention for the Prevention of Pollution from Ships*" (MARPOL 73/78) to prevent and minimise the release of these water pollutants to the marine environment. Possible impacts associated with barge discharges are therefore considered to be negligible.

4.5.6 Potential water quality impact due to loading and unloading barging activities is expected to be insignificant with proper implementation of all recommended mitigation measures as specified in **Section 4.6**.

4.5.7 No solid wastes will be permitted to be disposed overboard and thus water quality impacts from such sources will be eliminated.

Site Runoff from Stockpiling Area

4.5.8 The excavated rocks will be processed and stored in the stockpiling area before loading to the barge at Ngau Kok Wan and after unloading from the barge at Wok Tai Wan. Potential water pollution sources may come from runoff and erosion of the stockpiles from the stockpiling area. During rainstorms, site runoff would wash away the soil particles on the stockpiles. The site runoff is generally characterised

by high concentrations of suspended solids (SS). Release of uncontrolled site runoff would increase the SS levels and turbidity to the nearby marine waters. Site runoff may also wash away contaminated soil particles and therefore cause water pollution. Wind blown dust would also be generated from the stockpiling area. It is possible that wind blown dust would fall directly onto the nearby water bodies when a strong wind occurs. Dispersion of dust within the works areas may increase the SS levels in surface run-off causing a potential impact to the nearby WSRs. Mitigation measures should be implemented to minimise potential impacts of site runoff.

Sewage from the Site

4.5.9 Domestic sewage would be generated from the operators during rock processing. Portable chemical toilets should be provided onsite. The facility should be serviced and cleaned by a specialist contractor at regular intervals. Provided that sewage is not discharged directly into stormwater drains or marine waters adjacent to the construction site, and temporary sanitary facilities are used and properly maintained, it is unlikely that sewage generated from the site would have a significant water quality impact.

4.6 Construction Phase Mitigation Measures

Construction Site Run-off and General Construction Activities

4.6.1 The recommended mitigation measures for land-based construction works as per Section 5.7.2.1 to 5.7.2.20 of the approved EIA report shall be adopted to minimize the potential water quality impact.

4.6.2 Under the WPCO, Contractor is required to apply to EPD for a discharge licence for discharging effluent from the construction site. The discharge effluent must meet the requirements specified in the discharge licence. All the runoff and wastewater generated from the works areas should be treated so that it satisfies all the standards listed in the DSS-TM. The beneficial uses of the treated effluent for other on-site activities such as dust suppression, wheel washing and general cleaning etc., can minimise water consumption and reduce the effluent discharge volume. If monitoring of the treated effluent quality from the works areas is required during the construction phase of the Project, the frequency of the monitoring should be carried out in accordance with the WPCO license requirement.

4.6.3 The site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be followed as far as practicable to minimise surface run-off and the chance of erosion from stockpiling area. The following measures are recommended to mitigate the potential water quality impacts from the site runoff:

- Stormwater surface run-off from stockpiling area should be discharged into storm drains via adequately designed sand / silt removal facilities such as sand traps, silt traps and sedimentation basins. Channels, earth bunds or sand bag barriers should be provided on site to properly direct stormwater

to such silt removal facilities. Temporary bund wall should be provided adjacent to the sea side of the stockpiling area site to prevent the surface runoff or any other polluted water from flowing direct to the sea. Perimeter channels at the boundaries of stockpiling area should be provided as necessary to intercept storm runoff from outside the site so that it will not wash across the site. Catchpits and perimeter channels should be constructed in advance of site formation works and earthworks. The design of the temporary on-site drainage system will be undertaken by the contractor prior to the commencement of construction. The size of the drains shall be determined to suit the actual site arrangement according to the DSD's Stormawater Drainage Manual

- All drainage facilities, silt removal facilities, channels and manholes should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rainstorms. Deposited silt and grit should be removed regularly to prevent overflows and localised flooding. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC PN 1/94. The detailed design of the sand / silt traps should be undertaken by the contractor prior to the commencement of construction.

- Open stockpiles of the excavated rocks on site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of soil, silt or debris into any drainage system.

- Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent construction materials, soil, silt or debris being washed into the drainage system and storm runoff being directed into foul sewers.

- Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecasted, and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events.

- All vehicles and plant should be cleaned before leaving the stockpiling area to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at the exit of stockpiling area where practicable. Wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.

Sewage

4.6.4 Portable chemical toilets with sewage holding tanks are recommended for the handling of the construction sewage generated by the workforce. A licensed Contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal of the night soil and maintenance.

Accidental Spillage of Chemicals

4.6.5 The Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes.

4.6.6 Any service shop and maintenance facilities should be located on hardstanding within a bunded area and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges.

4.7 Operational Phase Mitigation Measures

Barge Operation

4.7.1 Standard measures and good site practices are recommended to be implemented to avoid or minimise the potential water quality impacts arise from barge operation. There measures include:

- All vessels should be well maintained and inspected before use to limit any potential discharges to the marine environment;
- All vessels must have a clean ballast system;
- No direct discharge of sewage/grey wastewater is allowed;
- No soil waste is allowed to be disposed overboard;
- All hopper barges should be fitted with tight fitting seals to their bottom openings to prevent leakage of material;
- Operation should not cause foam, oil, grease, scum, litter or other objectionable matter to be present on the water;
- All vessels should be sized so that adequate clearance is maintained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash;

- Loading and/or unloading of barges and hoppers should be controlled to prevent splashing of material into the surrounding water. Barges or hoppers should not be filled to a level that will cause overflow of materials or polluted water during loading or transportation; and

- All vessels should follow the "International Convention for the Prevention of Pollution from Ships" (MARPOL 73/78) to prevent and minimise the release of water pollutants to the marine environment.

Land-based Activities

4.7.2 Mitigation measures recommended during the construction phase for site runoff from temporary stockpiling and sewage shall be adopted to minimize potential impacts during the stockpiling activities and sewage generated from operation.

4.8 Environmental Monitoring and Audit

4.8.1 The implementation of good construction works practice as well as the various specific mitigation measures recommended above will be important to prevent the pollution of marine water during the rock crushing. It is, therefore, recommended that the environmental monitoring and audit requirements on water aspect as stipulated in the approved EM&A Manual would remain valid.

4.8.2 No additional water quality monitoring is required during the construction and operation phase.

5 LAND CONTAMINATION

5.1 Introduction

5.1.1 This section identifies the potential for contaminated land impacts during the rock crushing and stockpiling process.

5.2 Environmental Legislation and Standards

5.2.1 The following legislation is relevant to land contamination issues as a result of handling, treatment and disposal of contaminated materials:

- Environmental Impact Assessment Ordinance (EIAO), Annex 19;
- Waste Disposal Ordinance (Cap 354);
- Waste Disposal (Chemical Waste) (General) Regulation (Cap 354C); and
- Dangerous Goods Ordinance (Cap 295).

5.2.2 The following EPD publication provides guidance on the land contamination assessment in this Assignment:

- Code of Practice of the Packaging, Labelling and Storage of Chemical Waste, EPD (1992).
- Practice Guide for Investigation and Remediation of Contaminated Land
- Guidance Note for Contaminated Land Assessment and Remediation; and
- Guidance Manual for Use of Risk-Based Remediation Goals (RBRGs) for Contaminated Land Management.

5.3 Assessment Methodology

5.3.1 The assessment for land contamination of the Project site has been carried out with reference to the above guidelines and involved a desktop study to identify the historical land use of the project site and site walkover to identify any existing potentially contaminating land uses at the proposed work areas.

5.4 Assessment Findings from Site Appraisal

Identification of the Site Future Land Use

5.4.1 The site at Ngau Kok Wan is proposed to be used as rock processing works, rock and aggregates stockpiling and barging point under the Project. The site area is approximately 11,000 m^2 and is located at the northwest coastal area of Tsing Yi. It is bounded by natural terrain to the east and west, the Rambler Channel to the north and Tsing Yi North Coastal Road to the south. The site is currently zoned as "Other Specific Uses" annotated "Recreation and Tourism Related Uses" on the approved Tsing Yi Outline Zoning Plan No. S/TY/30.

Review of Historical Information

5.4.2 Information including the history and other available information regarding the Project site has been reviewed in order to identify the potential current and historical, on-site and off-site activities that could result in contamination of the Project site, including

- Potential contaminating activities that have occurred at the site such as storage and handling of chemicals, oil and/or hazardous waste, on-site waste disposal, burn pits, etc. There may have been different activities over time which may have caused contamination, all of which should be noted;
- Storage facilities, pipelines, collection sumps for chemicals, oil and/or hazardous wastewater/waste that are or were present on the site;
- Accidents, fires, explosions, spillages and any pollution incidents attributed to the site areas and any remediation that has occurred at the site or neighbouring areas; and
- Other site information should include geological and hydrogeological characteristics of the site.

5.4.3 With reference to Annexes C1 and C2 of EPD's Practice Guide for Investigation and Remediation of Contaminated Land, the information on the present activities and past land use history in relation to any possible land contamination have been reviewed.

5.4.4 A preliminary environmental review, including land contamination assessment, was conducted in 2018 under the *Agreement No. CE 21/2016 (GE) Technical Study on Underground Quarrying in Hong Kong – Investigation.* The land contamination assessment was carried out in the form of desktop review and the assessment area had covered the site at Ngau Kok Wan. Location of the assessment area is shown in **Figure 5.1**.

5.4.5 Based on the findings of the preliminary review, Ngau Kok Wan was used as a barging point and open storage of materials between 1996 and 2002. It was partly

occupied by Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site and used as material storage since 2016.

5.4.6 As the site was unpaved and it is possible that handling and storage of chemicals for vehicle / equipment maintenance was undertaken, it was concluded at the time that the risk of potential land contamination could not be ruled out. Detailed land contamination assessment was recommended to be carried out in the EIA stage of the underground quarrying project to confirm any exposures of risk due to land contamination on the future occupants of the project. Based on the findings of site investigations and assessment to be undertaken during the EIA stage, appropriate remediation actions, if required, would be formulated and endorsed for implementation by EPD.

Historic Land Use

5.4.7 A selection of historical aerial photos and maps has been collated and reviewed. Historical aerial photographs of Project Site for the years between 1963 and 2020 are presented in **Appendix 5.1** and summarised in **Table 5.1**.

Table 5.1 Historical Land Use

Year	Reference of Aerial Photos in Appendix 6.1	Site Description
1963	AP1 (#1963_4577)	The Ngau Kok Wan Site was covered by the Rambler Channel and natural terrain.
1976	AP2 (#15443)	No significant land use changes were noted within the site at Ngau Kok Wan.
1985	AP3 (#67562)	No significant land use changes were noted within the site at Ngau Kok Wan.
1995	AP4 (#CN9437)	The Ngau Kok Wan Site was reclaimed and existing access road was constructed.
2001	AP5 (#CW32524, #CW32525)	A barging point and open storage of material was observed at Ngau Kok Wan Site.
2012	AP6 (#CS39536)	The barging point and open storage of material in the Ngau Kok Wan Site was vacated.
2017	AP7 (#E018049C)	The eastern portion of the vacant land within Ngau Kok Wan Site was observed to be the Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site. No significant land use were observed in the remaining portions of Ngau Kok Wan Site.
2020	AP8 (#E100428C, #E100432C, #E100435C)	The Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site within Ngau Kok Wan Site was vacated. No significant land use were observed in the remaining portions of Ngau Kok Wan Site.

5.4.8 At Ngau Kok Wan, the land was being operated as an open storage from 1996 to 2002. It was then being vacated for 10 years before being occupied by the Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site in 2017. The maintenance site was only used for storage of radar parts with no repairing/ maintenance works and chemical storage carried out on site. Details are being discussed in **Section 5.4.13.**

5.4.9 As reported by the representative from Marine Department during previous preliminary environmental review conducted in Feb 2020, the Maintenance Site was only used for storage of radar parts, no repairing works were conducted on site and no chemicals or fuel were stored on site during the time of operation.

Site Walkover

5.4.10 A site walkover was conducted on 11 November 2021 and the details of the site walkover events are presented in **Appendix 5.2**. The findings indicated that there were no potential sources or signs of contamination, e.g. chemicals, oils and hazardous waste handling and storage locations, bulk storage tanks, sumps, pipelines, staining, decolouration, distressed vegetation, etc at any of the works areas. Photos taken during the site walkovers showing the existing land use and land condition have been presented **Figure 5.2** and **5.3**.

5.4.11 During the site walkover, Ngau Kok Wan was occupied by CSAJV for the temporary stockpiling of construction materials (e.g. soil and aggregates) under *Contract No. DC/2020/05, Relocation of Sha Tin Sewage Treatment Works to Caverns- Main Caverns Construction*. Part of the Ngau Kok Wan Site was covered by overgrown vegetations. No chemical / oil storage, stains or stressed vegetation were observed.

Acquisition of Information from Government Departments

5.4.12 Request was made to EPD for (i) records of Chemical Waste Producers Registration; and (ii) past and present chemical spillage/ leakage records. According to the reply from EPD in **Appendix 5.3**, no records of chemical spillage/ leakage were found in the Project site.

5.4.13 Based on the reply from EPD on 9 December 2020, there were no chemical waste producers' registration or chemical spillage/ leakage records found within the project site.

5.4.14 According to the reply from FSD on 20 November 2020 and further clarification on 27 November 2020, DG stores of paint, acetylene and oxygen were identified and located on the G/F of 98 Tam Kon Shan Road (The Hong Kong Shipyard Ltd), which is situated at least 350 m east of Ngau Kok Wan Site (refer to **Appendix 5.3**). No records of DG license, fire incidents or incidents of spillage / leakage of DGs were found within the proposed works areas within the site.

5.4.15 Potential land contamination issues due to the incident record provided are thus not anticipated.

Site Geology

5.4.16 According to the 1:20000 Geological Map Sheet 6 (Yuen Long), the bedrock underlying Ngau Kok Wan Site in the area of North-West Tsing Yi comprises mainly coarse ash Tuffs of the Yim Tin Tsai and Shing Mun Formations of the Repulse Bay Volcanic Group. Some minor intrusions of Felsparphyric and Quartzphyric Rhyolite also occurred.

5.4.17 Based on the relevant ground investigation (GI) report, Ngau Kok Wan was underlain by Completely Decomposed Tuff / Colluvium comprising loose yellowish brown with dark grey speckles and slightly clayey fine to coarse sand with some angular gravels of rock fragments of 2.50 m thickness, followed by highly decomposed Tuff comprising weak to moderately, yellowish brown with dark grey and green to brown speckles and spots, gravels of rock fragments and slightly silty fine to coarse sand matrix of 4.00m thickness and highly to moderately decomposed Tuff comprising light grey and yellowish brown rock fragment of 1.00m thickness. The underlying Rock was moderately and slightly decomposed Tuff of at least 52.83 m, with the corresponding termination elevation of -36.68 mPD. The strength of the Rock was moderately strong to very strong.

5.5 Potentially Contaminated Site

5.5.1 Although the Ngau Kok Wan Site have previously been used as storage areas and/or Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site, there is no evidence from the site walkover records to indicate the presence of contamination within the site (e.g. no apparent chemical / oil storage, stains or stressed vegetation and no reportedly contaminating activities during the operation of the Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site). According to the preliminary environmental review under *Agreement No. CE 21/2016 (GE) Technical Study on Underground Quarrying in Hong Kong – Investigation*, it is expected that detailed land contamination assessment and, if necessary, remediation works will be carried out prior to any redevelopment under other development projects.

5.5.2 Under this Project, the proposed works for Ngau Kok Wan Site include rock processing works and aggregates stockpiling. The site will only be occupied temporarily from around mid 2022 to 2024. All the proposed works is expected to be carried out above ground and no soil excavation works will be conducted during the occupation. Given that (i) the underlying soil will not be excavated and handled, (ii) there are no underground works for the rock processing works and (iii) there are no evidence from the site walkover records to indicate the presence of contamination within the site, the potential land contamination impact associated with the proposed rock processing works at Ngau Kok Wan Site are considered minimal.

5.6 Environmental Monitoring and Audit

5.6.1 As contaminated land impacts are not predicted, according to the approved EM&A manual, regular site audit during construction phase shall be conducted. The EM&A requirements on land contamination aspect as stipulated in the approved EM&A Manual would remain valid.

6 LANDSCAPE AND VISUAL

6.1 Background

6.1.1 This section of the report presents the assessment for the landscape and visual resources of the proposed works. Major potential impacts associated with the proposed works on the landscape and visual receivers have been identified and mitigation measures recommended where required in order to reduce the significance of adverse impacts.

6.1.2 A description of the project is provided in **Section 2**.

6.2 Relevant Legislation and Guidelines

6.2.1 The following standards and guidelines are considered relevant to the proposed works:

- Environmental Impact Assessment Ordinance (EIAO) (Cap. 499) Section 16 and Technical Memorandum on Environmental Impact Assessment Process (EIAO-TM), particularly Annexes 3, 10, 11, 18, 20 and 21;

6.3 Landscape and Visual Impact Assessment Methodology

6.3.1 Landscape and visual impacts have been assessed for Ngau Kok Wan. Landscape and visual impacts are assessed against four criteria, namely:

- Impacts on LANDSCAPE PLANNING (the strategic landscape framework);
- Impacts on LANDSCAPE CHARACTER (the aggregate impression created by the combination of cultural and visual characteristics and physical resources);
- Impacts on LANDSCAPE RESOURCES (the physical components of the landscape); and
- Impacts on VISUALLY SENSITIVE RECEIVERS (VSRs) (those people who will see the Project).

6.3.2 The assessment of landscape impact has involved the following:

- Broad identification of the baseline LRs and LCAs that would be potentially affected by the Project at Ngau Kok Wan;
- Broad assessment of the degree of sensitivity of the LRs and LCAs identified;
- Broad identification of selected sources of landscape impacts;
- Broad identification of the magnitude of landscape impacts;
- Broad recommendation of selected landscape mitigation measures; and
- Broad prediction of the significance of residue landscape impacts with mitigation measures.

6.3.3 The sensitivity of each LR and LCA is classified as follows:

- **High**: Important landscape or landscape resource of particularly distinctive character or high importance, sensitive to relatively small changes;
- **Medium**: Landscape or landscape resource of moderately valued landscape characteristics reasonably tolerant to change; and
- **Low**: Landscape or landscape resource, the nature of which is largely tolerant to change.

6.3.4 The magnitude of change on LR and LCA is classified as follows:

- **Large:** The landscape or landscape resource would have a major change;
- **Intermediate**: The landscape or landscape resource would have a moderate change;
- **Small**: The landscape or landscape resource would have slight or barely perceptible changes; and
- **Negligible**: The landscape or landscape resource would have no discernible change.

6.3.5 The significant thresholds of landscape impacts is categorized as follows:

- **Substantial**: Adverse/ Beneficial impact where the proposal would cause significant deterioration or improvement in existing landscape quality.
- **Moderate**: Adverse/ Beneficial impact where the proposal would cause noticeable deterioration or improvement in existing landscape quality.
- **Slight**: Adverse/ Beneficial impact where the proposal would cause barely perceptible deterioration or improvement in existing landscape quality.

- **Insubstantial**: No discernible change in the existing landscape quality.

6.3.6 The rationale in assessing the potential significances of landscape impacts are summarized in **Table 6.1** below:

Table 6.1: Matrix for Impact Significance Threshold before Mitigation

Magnitude of Change	Sensitivity		
	High	**Medium**	**Low**
Large	Substantial	Moderate/ Substantial	Moderate
Intermediate	Moderate/ Substantial	Moderate	Slight/ Moderate
Small	Moderate	Slight/ Moderate	Insubstantial/ Slight
Negligible	Insubstantial	Insubstantial	Insubstantial

6.4 Baseline Conditions

Proposed Rock Crushing Facilities, Barging Point and Temporary Storage at Ngau Kok Wan

6.4.1 Ngau Kok Wan site is proposed to be used for rock crushing and screening, temporary stockpiling and barging for the period from mid 2022 to 2024 tentatively. The site would be reinstated to the existing conditions after use and no permanent visual impact would be induced after construction phase. The site now is vacant as shown in the aerial photo in **Appendix 6.1**. The potential landscape impacts would be assessed with appropriate mitigation measures proposed in this section.

6.4.2 The Visual Envelope and VSRs of Ngau Kok Wan is indicated in **Figure 6.1**. The height of the proposed rock crushing facilities, temporary stockpiling and barging points are approximately about 10 - 15m. It is considered that the structures are low in height and the degree of visibility to the Project is glimpse. The magnitude of visual change is considered as small. Therefore, no significant visual impact to the vicinity would be expected and assessed. and should not cause significant visual impact to the vicinity.

Baseline Landscape Resources and Landscape Character Areas

6.4.3 Key Landscape Resources (LRs) and Landscape Character Areas (LCAs) that would be potentially affected are being reviewed in this report.

Key Landscape Resources (LRs)

6.4.4 The preliminary findings of baseline LRs which will be potentially affected by the Project, together with their sensitivity are described in **Table 6.2**. The locations of

baseline LRs are mapped in **Figure 6.2**. No OVT and tree with conservation importance is identified within the assessment area.

Table 6.2 Baseline LRs and their Sensitivity

LRs	Description	Sensitivity
LR1	Roadside Planting on Modified Slope Roadside tree planting on modified slope provides greening and visual buffer between the busy roads at North West Tsing Yi Interchange. It also provides a green backdrop at North Tsing Yi. Based on the broad brush tree survey conducted in Feb 2020 under separate submission, common pioneer tree species on slope such as *Acacia confusa*, *Acacia mangium*, *Casuarina equisetifolia*, *Corymbia citriodora* and *Leucaena leucocephala* are found near the proposed cavern. The quality of these resources is medium. The ability to accommodate change is medium and the sensitivity of this resource is considered as medium.	Medium
LR2	Hillside Woodland Woodland area with trees grown densely at coastal hillside to the north of Wok Tai Wan. This hillside woodland is important in the landscape and visual context. It provides an important green buffer between the built-up area and the natural shore. This LR is intolerant to change and considered to have high sensitivity.	High
LR3	Vacant land in Fenced-off Areas No major landscape resource is found in the vacant land in the fenced-off areas. The ability to accommodate change is high and the sensitivity of this resource is low.	Low
LR4	Rambler Channel and Ma Wan Channel Sea Waterbody The sea waterbody comprises of Rambler Channel and Ma Wan Channel is a valuable landscape resource contributing to the unique waterfront setting of the Ting Kau area. In view of the physical characteristics of the channels, the sensitivity of this LR is high.	High

Landscape Character Areas (LCAs)

6.4.5 The preliminary findings of baseline LCAs which will be potentially affected by the Project, together with their sensitivity are described in **Table 6.3**. The locations of baseline LCAs are mapped in **Figure 6.3**.

Table 6.3 Baseline LCAs and their Sensitivity

LCAs	Description	Sensitivity
LCA1	Transportation Corridor Landscape LCA This LCA comprises the major highways corridors in the North West Tsing Yi Interchange, also includes the Ting Kau Bridge and the Lantau Link Visitors Centre. Major features such as bridges, flyovers, signage gantries, interchange, and associated roadside buffer planting areas. This type of LCA is	Low

LCAs	Description	Sensitivity
	common to Hong Kong. It has high ability to accommodate change. The sensitivity is considered as low.	
LCA2	Industrial Urban Landscape LCA This is found on the low-lying areas of the reclaimed land along the coast of north Tsing Yi. It mainly comprises of the Marine Department Ngau Kok Wan Vessel Traffic Service System Maintenance Site within the assessment area and the adjoining vacant lands on the peripheries. The quality of this LCA is low, with high ability to accommodate change and the sensitivity of this LCA is considered as low.	Low
LCA3	Strait Landscape LCA This LCA are inshore coastal water enclosed by significant landforms of north Tsing Yi and Ting Kau, creating a distinct sense of enclosure on the two sides. It characterised by the surrounding landforms and the muted hues and horizontality of their coastal waters comprised of passing vessels, shipping traffic, and waterborne recreational activity. The quality of this LCA is high, with low ability to accommodate change and the sensitivity of this LCA is considered as high.	High

6.5 Landscape Mitigation Measures

6.5.1 Based on the potential landscape impacts identified, it is recommended that all existing trees, particularly in the periphery of the site and along the existing access road, to be retained shall be carefully protected during construction. Tree protection works shall be in accordance with DEVB TC(W) No. 4/2020 - Tree Preservation and Tree Management Practice Note No. 1 – Tree Preservation during Construction.

6.5.2 The recommended mitigation measures for construction phase shall be implemented as early as possible in order to minimize the landscape impacts in the construction stage.

6.6 Preliminary Evaluation of Residual Impacts

Landscape Impact

6.6.1 The potential significance of the impacts on landscape resources (LR3) in Ngau Kok Wan is slight during the construction phase before mitigation as the site is vacant now. For the remaining LRs and LCAs, the impact significance is negligible, and no mitigation measure is required.

6.7 Conclusion

6.7.1 In view of the above, with the implementation of the proposed preliminary mitigation measure, it is considered that the residual landscape impact in Ngau Kok Wan site will be reduced to an acceptable level.

6.7.2 As described in this chapter**,** no significant visual impact to the vicinity are expected and, therefore, no mitigation measure is required. The visual impact in Ngau Kok Wan site under this Project is negligible.

7 CONCLUSIONS

7.1 Implications under the Environmental Impact Assessment Ordinance

7.1.1 The scopes of this Project comprise of rock crushing and screening facilities, temporary stockpiling rock and aggregate and barging point at Ngau Kok Wan.

7.1.2 As discussed in **Section 2**, the Relocation of STSTW to Caverns is a Designated Project (DP) with an EP (EP No. EP-533/2017). Variation of the EP would be sought accordingly pursuant to Section 13(5) of EIAO would be applied with this supporting Environmental Review Report.

7.2 Key Environmental Findings

7.2.1 Potential air quality impact arising from the proposed variation has been identified and evaluated. The proposed rock processing works and associated logistics in Tsing Yi would not cause adverse air quality impact in the study area with the implementation of control technologies and good site practice recommended in the BPM. Given the high NO_2 ambient concentration, off-site measure, portable air purifier is recommended to be installed at affected air sensitive use.

7.2.2 A review on the potential water quality impact due to the proposed rock processing plant and barging points has been conducted. The potential water quality impacts associated with the proposed variation have been identified and evaluated. Good site practice and mitigation measures recommended in the approved EIA Report for land-based construction works are still valid to minimize the potential water quality impact. Mitigation measures are recommended to minimize the potential water quality impact from barge operation and site runoff from stockpiling area. With implementation of the recommended mitigation measures, no adverse water quality impact is anticipated.

7.2.3 The proposed works under the Project for Ngau Kok Wan Site include rock processing works and aggregates stockpiling. No evidence from the site walkover records and historical information to indicate the presence of contamination within the site. The site will only be occupied temporarily from mid 2022 to 2024, the potential land contamination impact associated with the proposed rock processing works at Ngau Kok Wan Site are considered minimal.

7.2.4 Landscape impact assessment is conducted for Ngau Kok Wan. With the implementation of the proposed preliminary mitigation measure, it is considered that the residual landscape impact in Ngau Kok Wan site will be reduced to an acceptable level. No significant visual impact to the vicinity are expected and, therefore, no mitigation measure is required. The visual impact in Ngau Kok Wan site under this Project is negligible.

Calculation of Dust Suppression Efficiency from Watering for Paved Road

(Calculation based on Equation (5-4) of USEPA's Control of Open Fugitive Dust Sources)

C = 100 - (0.8 x p x d x t) / i

where

C = average control efficiency, in percent
p = potential average hourly daytime evaporation rate in mm/hour
d = average hourly daytime traffic rate in vehicles per hour
i = application intensity in L/m^2
t = time between applications in hour

Assumptions:

1. Potential average hourly daytime evaporation rate p can be estimated by 0.0049 * e, where e is the mean annual average evaporation rate (inches).
   From the past measurement data in Hong Kong's Observatory, evaporation recorded at King's Park between 1991-2020 is 1204.1 mm^.
   p = 0.0049 * (1204.1 mm) = 0.0049 * (47.41 inches)
   = 0.2323 mm/hour

2. Estimate average hourly daytime traffic rate in vehicles per hour,
   d = 160

3. Assume watering application intensity,
   i = 1.8 L/m^2

4. Assumes watering frequency as twice every one hour
   t = 0.5 hour

With the above assumptions, dust suppression efficiency is calculated as below:

C = 100 - 0.8 x 0.2323 x 160 x 0.5 / 1.8
= 91.7 %

Note: ^ Evaporation recorded at King's Park between 1991-2020 refers to HKO's Webiste https://www.hko.gov.hk/en/cis/normal/1991_2020/normals.htm.

[3] For conservative approach, SO_2 Emission Factors of No.5 oil fired from USEPA AP-42, section 1.3, 5/10 ed. Table 1.3-1 are adopted, where SO_2 Emission Factor = 157 x 0.12 x 0.005

[4] As there is no emission factors for RSP and FSP, emission factors for RSP and FSP were assumed to be the same as that of TSP for conservative estimations.

Note:
[1] Dust Collector was applied at emission points EP-DDCA / B. The Overall Control Efficiency was presented in Tables 1a, 1b and 1c of Appendix 3.1.
[2] TSP Emission Factor refers to Background Information for revised AP-42 Section 11.19.2, P.27
[3] As there is no TSP Emission Factor for primary and secondary crushing in Background Information for revised AP-42 Section 11.19.2, P.27, TSP Emission Factor for tertiary crushing was adopted.
[4] RSP Emission Factor refers to USEPA AP-42, Section 11.19.2, Table 11.19.2-1
[5] As there is no RSP Emission Factor for primary and secondary crushing in USEPA AP-42, Section 11.19.2, Table 11.19.2-1, RSP Emission Factor for tertiary crushing was adopted.
[6] As there is no FSP Emission Factor for primary, secondary and tertiary crushing in USEPA AP-42, Section 11.19.2, Table 11.19.2-1, RSP Emission Factor for tertiary crushing was adopted.
[7] As there is no FSP Emission Factor for screening and fine screening in USEPA AP-42, Section 11.19.2, Table 11.19.2-1, RSP Emission Factor for screening and fine screening were adopted.
[8] Referred to Background Information for revised AP-42 Section 11.19.2, P.4, the targeted aggregates size of fine screen is <4.76mm. As distribution of aggregate size are 50% for <5mm and 50% for >5mm, emission factors for 2nd Screening after Tertiary Crushing/1st Screening = Emission factor for screening x 0.5 + Emission factor for final screening x 0.5.

Note:
[1] With reference to Table 13.2.1-3, Section 13.2.1, AP-42, USEPA (Version 1/11), three relevant industries were identified. They include concrete batching, sand and gravel processing and quarry. After review the nature, material and product size of these industries, the silt loading value of 12 g/m2 for concrete batching works was adopted in the calculation of emission strength for paved haul road.
[2] Number of trips per hour was provided by the contractor.
[3] Wet suppression by watering was applied. The control efficiency of wet suppression for paved road was presented in this Appendix 3.1.
[4] Emission Rate = Emission Factor / 1000 x Number of Trips per Hour / 3600 x Road Length / Area

Note:

1. Reference to AERMOD Implementation Guide, the determination of the Bowen ratio should be based on a simple unweighted geometric mean (i.e., no direction or distance dependency) for a representative domain, with a default domain defined by a 10km by 10km region centered on the measurement site.
2. Reference to AERMOD Implementation Guide, the determination of the albedo should be based on a simple unweighted arithmetic mean (i.e., no direction or distance dependency) for the same representative domain as defined for Bowen ratio, with a default domain defined by a 10km by 10km region centered on the measurement site.
3. Surface roughness length is based on an inverse-distance weighted geometric mean for an upwind distance of 1km relative to the concerned site.
4. Land use within 10km by 10km region centered on the measurement site included 22.67% urban (22670938.99 m^2), 43.62% Grassland (43621908.44 m^2), and 33.71% water (33707152.5 m^2).
5. For the parameters including albedo, Bowen Ratio and surface roughness, the default value for "Winter" is excluded from calculating the representative values.

Dear Dan

The findings in para. 2.3.3 and Section 4.3, i.e. 50% split of rock will be discharged only from 10:00 to 16:00 via Marine transport before 2024, should be included in the **Section 5 Conclusion**.

I have no further comment on the report in traffic engineering viewpoint.

Dear Caleb,

Further to the email below, please see enclose the (draft) revised final report for your kind consideration.

The figures and paragraphs that were updated are highlighted in yellow as per discussed lastly, between your good-self our Kevin, for your ease reference.

Due to the file size restriction, you can download the figures and appendix at the link below:

https://we.tl/t-E2eDCc9mOq

Subject to your acceptance, we shall close out the report at the soonest time accordingly.

Thanks in advance and feel free to contact me/Kevin at any time.

Dear Eason,

I have no further comments on the traffic review on the alternative site rock processing from traffic engineering point of view provided that:
(i) The discharging hours will be carried out outside peak hours, and such hours will be further reviewed in TMLG in view that there might be some local peak hours (e.g. logistic peak hours at Tsing Yi district).

(ii) Tsuen Wan section will be consulted on travelling route.

Thank you very much.

Dear Florence,

Thank you for your prompt response and please find attached our updated RtoC for your consideration.
Grateful if you could call and discuss shall you have any further queries.

Many thanks!

Note:

*18 vehicle classes in EMFAC v4.3 has been adopted in the assessment. For conservative approach, traffic flow under index 7 (Medium & Heavy Goods Vehicles >15t) and index 13 (Non-franchised Buses >15t) in EMFAC v4.2 were assumed to be traffic flow under index 17 (Heavy Goods Vehicles >24t) and index 18 (Franchised Buses (>24t) in EMFAC v4.3, respectively.

Note:

*18 vehicle classes in EMFAC v4.3 has been adopted in the assessment. For conservative approach, traffic flow under index 7 (Medium & Heavy Goods Vehicles >15t) and index 13 (Non-franchised Buses >15t) in EMFAC v4.2 were assumed to be traffic flow under index 17 (Heavy Goods Vehicles >24t) and index 18 (Franchised Buses (>24t) in EMFAC v4.3, respectively.

Appendix 3.5
Calculation of Open Road Emission Rates

Appendix 3.5 Calculation of Open Road Emission Rates

Estimation of Vehicular Emission for the Study Area with EMFAC-HK model

The major air quality impact arisen by the Project is the plant emission during the operation phase. Open road emission also contributes to the cumulative air quality in the Study Area. As NO_2 and particulate matters are the key pollutants for the rock processing, the estimation shall also focus on vehicular emission in NO_2 and particulate matters namely TSP, RSP and FSP. EMFAC-HK v4.3 model is adopted to estimate the vehicular emission rates of NO_X and particulate matters.

As most of the open roads in the study area are expressways, i.e. no engine start/stop is anticipated, start emission is not considered significant in the study area. Dump trucks transporting boulders will unload at Ngau Kok Wan and then leave the site, i.e. no engine start/stop is anticipated. Concrete mixer truck accessing nearby CBP keep engine running for drum rotation which keeps the product concrete in liquid state, i.e. no engine start/stop is anticipated.

The input parameters and model assumptions made in EMFAC-HK model are summarised as follows.

Model Year

EMFAC-HK considers 45 years of model years for the estimation of vehicular emission. The model years start from 45 years preceding the year of interest to the year of interest as the final model year. The following table summarizes the starting and final model years of the assessment years implemented in EMFAC-HK.

Table 1 Starting and Final model years in EMFAC-HK

Scenario Year	Starting Model Year	Final Model Year
2023	1979	2023
2024	1980	2024

Vehicle Emission Standard Implementation Programme and Technology Fraction

According to EPD's Guideline on Modelling Vehicle Emissions - Appendix III, default vehicle emission standard implementation programme and technology fraction in EMFAC-HK was used.

For the access road, 65% of Euro V trucks and 35% of Euro VI trucks (i.e. vehicle class of Heavy Good Vehicle >24t) would be adopted for the delivery of rock products between the proposed crushing plant and the construction site of Sha Tin Cavern Sewage Treatment Works. Under conservative approach, all Euro V trucks and Euro VI trucks were assumed to be registered in Year 2012 and Year 2018, respectively. The adopted technology group fractions and licensed vehicle by age for Euro V and Euro VI trucks are presented in table below.

Table 2 Technology Group Fractions and Licensed Vehicle by Age (Trucks Running on Access Road)

Vehicle Population

As recommended in the EPD's Guideline on Modelling Vehicle Emissions, default vehicle populations forecast in EMFAC-HK was used.

Vehicle Accrual

The default accrual rates in EMFAC-HK are estimated from the local mileage data adjusted to reflect the total VKT for each vehicle class. The default value was used.

Vehicle Kilometre Travel (VKT)

The "vehicle fleet" refers to all motor vehicles operating on roads within this assessment area. The modelled fleet was broken down into 18 vehicle classes based on the information in the Transport Monthly Digest and vehicle population provided by EPD. Vehicle-kilometer-travelled (VKT) represents the total distance travelled on a weekday. The VKT is calculated by multiplying the number of vehicles, which based on the highest predicted hourly traffic flow, and the length of road travelled in the assessment area. The diurnal variation of VKT in the assessment area was provided by the traffic consultant, and the input in the model is by vehicle/fuel/hour.

Vehicle Speed

Vehicle speed on each road link at each hour was provided by the traffic consultant. All the vehicle classes on the same road link were assumed to have the same travelling speed, except medium goods vehicles, heavy goods vehicles, buses and public light buses. In accordance with the Road Traffic Ordinance, for any road with design speed limit of 70 kph or above, the speed limit for medium goods vehicles, heavy goods vehicles and buses would be limited to not more than 70 kph. Thus, the speeds of medium goods vehicles, heavy goods vehicles and buses from the flow speed or 70 kph, whichever is lower, were adopted. For the public light buses, the speed limit should be limited to post speed of the carriageway or 80 kph, whichever is lower, were adopted.

Temperature and Humidity Profile

Year 2020 meteorological data for hourly temperature and relative humidity profiles were adopted from the Hong Kong Observatory's New Tsing Yi Weather Station which is the closest to the Site.

For 1-hour average of NO_2, the daily profile of the lowest temperature and relative humidity in each hour for each month (i.e. 24 hours data in each month and for 12 months) were adopted to calculate the vehicular emission factors in the corresponding period on hourly basis.

For annual average of NO_2, the daily profile of the averaged temperature and relative humidity in each hour for each month (i.e. 24 hours data in each month and for 12 months) were adopted to calculate the vehicular emission factors in the corresponding period on hourly basis.

For TSP, RSP and FSP, the lowest temperature and relative humidity in the whole year were adopted to calculate the vehicular emission factors in the corresponding period on hourly basis.

Estimation of Composite Vehicular Emission Factor

Referring to the EPD's Guideline on Modelling Vehicle Emissions, "Emfac mode" generates emission factors in terms of grams of pollutant emitted per vehicle activity. It was applied for this Project, since it can provide hourly vehicular emissions, taking into account of ambient conditions and speeds combined with vehicle activity.

Assuming that NOx is comprised of NO and NO_2 only, the hourly emission of NO was calculated as the difference in NOx and NO_2 extracted from EMFAC-HK for each vehicle type.

The hourly emissions of NO, NO_2, TSP, RSP and FSP were divided by the number of vehicles and the distance travelled to obtain the emission factors in gram per miles per vehicle. The calculated 24-hour composite emission factors of 18 vehicle classes for each road type were adopted in the subsequent air dispersion modelling.

Vehicular Emission

Vehicular emission for NO_X, TSP, RSP and FSP are calculated based on the traffic forecast and EMFAC-HK v4.3 model and are summarized as below:

Remarks
(1) ME engine type is adopted as per Table 3-13. The engine type with the most number of calls for each type of vessels is adopted.
(2) Abundant Fuel Type is adopted as per Table 3-17, MVEIS. ME power greater than 1,100 kW would burn HFO (S3.2.33, MVEIS)
(3) Average Main Engine Power refers to Table 3-15, MVEIS
(4) Lighter/barge/cargo junk do not have main engine (S3.2.6, MVEIS)
(5) ME Loading Factor refers to Table 3-18, MVEIS
(6) Avg DWT of vessels are extracted from Table 3-6. Cruise Ship PAX is assumed to more than 2,600 as a worst-case assumption.
(7) AE Power for Cruise/Ferry, Oil Tanker, Tug,Lighter/Barge/Cargo Junk, Fishing/Fish Processing Vessel/Pleasure Vessel refers to Table 3-20, MVEIS, while AE Power for FCCV refers to Table 3-22, MVEIS.
(8) AE Loading Factor refers to Table 3-21.
(10) Emission factors refer to Table 3-27, Table 3-28, Table 3-29, MVEIS
(11) For Pleasure Vessel & Tug, no emission factor for HSD is available in the MVEIS. The ones for MSD are adopted instead.
(12) Low Load Adjustment Multiplier is adopted as per Table 3-30, MVEIS
(13) Vessel burning HFO is assumed to be equipped with AB, otherwise no AB accroding to S3.2.19, MVEIS. However, it is not applicable for Tug as there is no boiler with reference to remark of Table 3-23, MVEIS.
(14) Auxiliary Boiler Energy Default refers to Table 3-23. MEVIS
(15) AB is assumed to be off when ME load factor is higher than 20% (S3.2.20, MVEIS)
(16) Operation mode was derived from Table 3-24, MVEIS
(17) Brake Specific Fuel Consumption refers to Table 3-27 and Table 4-16, MVEIS
(18) SO2 Emission Factor = Brake Specific Fuel Consumption x 2 x 0.97753 x Fuel Sulphur Fraction with reference to 4.2.31, MVEIS
(19) Under the Air Pollution Control (Fuel for Vessels) Regulation, the sulphur content of marine fuel is limited to 0.5%, thus adopted for calculation
(20) Vessel Speed refers to Table 2-4, Study for Sha Tin Cavern – Quarry Delivery: Data For Emission Study (MTIA)
(21) With reference to Current Methodologies in Preparing Mobile Source Port-Related Emission Inventories – Final Report by ICF International for USEPA issued on April 2009 (ICF 2009 Report), For HFO PM10 EF = 1.35 + BSFC x 7 x 0.02247 x (Fuel Sulfur Fraction – 0.0246), For MDO & MGO PM10 EF = 0.23 + BSFC x 7 x 0.02247 x (Fuel Sulfur Fraction – 0.0024)
(22) With reference to ICF 2009 Report, the PM10 to PM2.5 conversion factor used is 0.97 based upon low sulfur fuels.
(23) Effective Emission Factor = Power Rating × Load Factor, if applicable × Low Load Adjustment Multiplier, if applicable x Emission Factor

Remarks

(1) According to the information provided by the supplier, the barges adopted in the project are equipped with main engines only. ME power rating of barge was provided by the suuplier.

(2) Marine fuel used by all RVs is assumed to be 100% MGO (S4.2.26, MVEIS)

(3) Under the Air Pollution Control (Marine Light Diesel) Regulation, the sulphur content of the marine light diesel is 0.05%

(4) ME Load Factor during the maneuvering mode refers to Table 4-7, MVEIS. There is no ME Load Factor during hotelling, which was assumed to be same as ME Load factor during Maneuvering.

(5) SO_2 EF = Brake Specific Fuel Consumption x 2 x 0.97753 x Fuel Sulphur Fraction with reference to S4.2.31, MVEIS

(6) NOx, PM10, PM2.5 Emission factors refer to Table 4-16, MVEIS

(7) The vessel speed is the average speed of the corresponding operation mode with reference to Table 3-24, MVEIS

(8) Brake Specific Fuel Consumption refers to Table 4-16, MVEIS

(9) PM10 EF = 0.23 + Brake Specific Fuel Consumption x 7 x 0.02247 x (Fuel Sulphur Fraction – 0.0024) with reference to 4.2.31, MVEIS

(10) PM2.5 emissions were estimated to be 97% of PM10 emissions with reference to S4.2.31, MVEIS

(11) Effective Emission Factor = Power Rating × Load Factor, if applicable x Emission Factor

With reference to *Review of Methods for NO to NO_2 Conversion in Plumes at Short Ranges,* Jenkin Method was adopted in this assessment to determine NO_2 concentration based on the cumulative annual average NOx concentration.

Jenkin Equation 2004:

$$[NO_2] = \frac{([NOx] + [Ox] + \frac{J}{k}) - \sqrt{([NOx] + [Ox] + \frac{J}{k})^2 - 4[NOx][Ox]}}{2}$$

Where:

$[NO_2]$: Concentration of NO_2

[NOx]: Concentration of NOx

[Ox]: Sum of concentration of NO_2 and O_3

J: Photolysis rate of NO_2 and O_3

k: Rate coefficient for oxidation of NO by O_3

The predicted annual average NO_2 concentration was estimated with empirical relationship derived using the latest available 5 years, including Years 2017, 2018, 2019, 2020 and 2021, of data from EPD's air quality monitoring stations (AQMS). Based on the site characteristics, monitoring data at Tsuen Wan general station, Kwai Tsing general station and Mong Kok roadside station were adopted as input for the curve fitting to calculate the J/k and Ox value and obtain the cumulative NO_2 at ASRs A52 and A55. For ASR A51, monitoring data at Tsuen Wan general station, Kwai Tsing general station, Tap Mun general station and Mong Kok roadside station were adopted.

Annual NO_2 vs. NOx monitoring data from selected AQMS was plotted in the form of scatter plot. The relationship of the selected annual NO_2 and NOx monitoring data was described by a fitted curve with reference to the formula presented in Jenkin (2004a) and Environment Agency UK (2007).

Table 1 Values for J/k and Ox

	A51	**A52 and A55**
J/k ($\mu g/m^3$)	15.5	24.2
Ox ($\mu g/m^3$)	96.1	104.6

With the adoption of values presented in **Table 1**, fitted curve defined by Jenkin Method could cover the upper bounds of data points. J/k and Ox adopted in this assessment have been optimised to obtain the fitted curve. The annual NO_2 concentrations were determined from the fitted curve using the total NOx concentrations.

最新測試證實

有效殺滅99.99%^人類冠狀病毒

有效去除高達99.9%^流感病毒與大腸桿菌

淨化高達99.98%揮發性有機化合物#

多重驗證，有效去除99.9%污染物（包括致癌物、流感病毒、金黃色葡萄球菌、大腸桿菌等等）

加拿大UBC 2012研究指出NCCO的淨化技術比「自動除菌離子」及「光觸媒」表現更優勝。只有NCCO淨化技術能大幅減少空氣中的阿摩尼亞、甲醛等。△

安全測試顯示使用NCCO淨化技術時，沒有檢測到額外臭氧排放，達到歐盟標準，證實安全。

^委託第三方實驗室測試，並根據《消毒技術規範》2002年版-2.1.3及GB 21551.3-2010對選定型號空氣淨化機進行去除人類冠狀病毒、流感病毒及細菌測試，結果或因情況不同而有所差異。

#經Arcon實驗室測試，將乙醛、丙酮，苯及乙酸等揮發性有機化合物排進1000L測試箱中，並對選定型號空氣淨化機進行去除揮發性有機化合物測試，結果或因情況不同而有所差異。

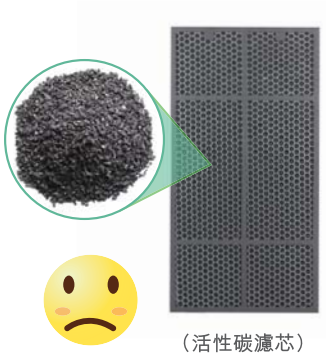
NCCO 絕不會造成二次污染

何謂二次污染？

當活性碳的濾芯飽和後，活性碳的吸附功能會失效，已吸附的污染物會以低濃度再次被釋放到空氣中，造成二次污染。相反，NCCO的濾芯是採用不斷循環分解機制，是環保可再生的技術，壽命更長。



（活性碳濾芯）

（NCCO氧聚解反應層濾芯）

活性碳濾芯		NCCO氧聚解反應層濾芯
吸附，短暫儲存污染物	技術特點	分解氣態污染物
飽和後會釋放被儲存的污染物造成二次污染	二次污染	絕不造成二次污染
濕度愈高，愈快釋放污染物	高濕度下的效能	保持高效能
3個月	濾芯壽命	正常維護保養下可長期使用#

若高效濾網沒有定期更換或受損，導致灰塵及油性物質遮蓋NCCO濾芯，將降低淨化效能。實驗室環境下，NCCO濾芯可持續使用12年。因應實際環境不同，建議可3-5年更換。

其它淨化技術缺點：

- 臭氧 ： 釋放高濃度臭氧對人體造成危害，低濃度臭氧無法淨化污染物。
- 自動除菌離子 ： 製造離子時，會釋放臭氧，對人體造成危害。
- 紫外線 ： 長波紫外線不能有效殺滅細菌、病毒，短波紫外線則對人類眼睛及皮膚構成傷害。
- 光觸媒 ： 淨化速度慢，當表面被污染後，效能會降低。

室內空氣污染來源

- **揮發性有機化合物VOCs**

  來源：油漆，各種裝修用溶劑。
  多種VOCs已被公認為致癌物。

- **生物污染**

  來源：包括細菌、真菌和過濾性病毒。
  可能引致暈眩、呼吸急促、過敏性肺炎等。

- **甲醛**

  來源：木材、油漆及皮革。
  高濃度的甲醛可能引致嗜睡、頭暈目眩、意識不清甚至死亡。

EC920

Ceiling Type NCCO Air Treatment Unit

- Available voltage **220-240V~ 50-60Hz.**
- Has multiple modes including ECO and TURBO mode.
- Remote control for easy operation.
- Typically used for room sizes of **20 - 90 m².***
- Longest filter life in industry.

This very flexible unit can easily be placed on walls or into ceilings and does not require any additional exhaust ventilation. It includes our world-wide patented NCCO technology and is ideal for the removal of odour, bacteria/viruses, VOCs and formaldehyde from affected areas.

Benefits of NCCO

(Nano Confined Catalytic Oxidation) filter system

- Disinfects and Deodorises.
- Reduces the number of air changes.
- Effectively removes bacteria, viruses and TVOCs (including formaldehyde)
- Protects health of employees - providing better working environment and increase in productivity.
- Collects allergens.
- Prevents inhalation of suspended particulates.
- Concentration of $PM_{2.5}$ and ozone reaches IAQ (Indoor Air Quality) excellent class.

Where can it be used?

- Hospitals – Barrier/isolation wards, labs, diagnostic rooms, store rooms.
- Animal hospitals.
- Pharmaceutical industry.
- Care Homes.
- Printing industry. (including 3D printing)
- Airports (e.g. smoking rooms) and railway stations. (e.g. rest rooms)
- Malls and stadiums.
- Hotels and offices.
- Premises located in poor air quality environment, e.g. landfills, industrial areas, etc.

** Removal efficiency dependent on sources of air pollutant encountered in room of use*

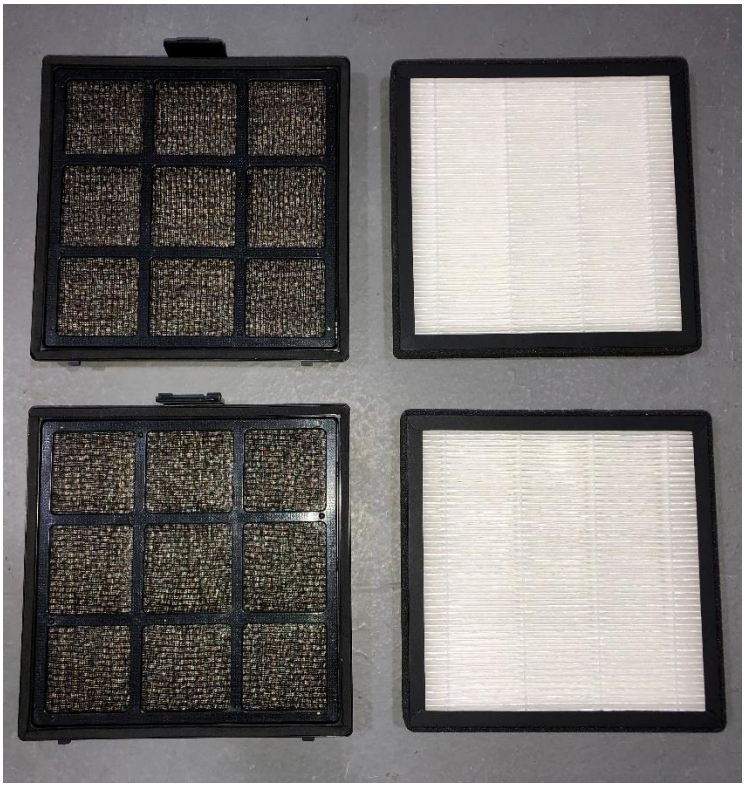
2. Detail Description of the sample

b-MOLA/NCCO1702



NCCO Filter and HEPA

3. Results of Removal Efficiency for Chemical Pollutant

Brand / Model No.	Operating Mode	Test Chemical	Initial Concentration	Removal Efficiency (%)
b-MOLA/NCCO1702	SS	Nitrogen Dioxide	0.982 ppm	92

In a $3m^3$ chamber, nitrogen dioxide was generated by redox reaction of nitric acid and copper metal. Gas generated is injected to the chamber with help of a vacuum pump. Internal circulation was turned on throughout the test to ensure the uniformity of chemical concentration inside the chamber. Initial concentration (C_0) of the chemical was recorded before switching on the air cleaner. Then, the air cleaner is switched on for 60 minutes and the chemical concentration was recorded as C_{60}, the final concentration of chemical.

The test was repeated again without the air cleaner to determine the natural decay of the chemical at the test chamber. Chemical was injected into the chamber by a syringe and evaporated by a hot plate with an initial concentration (C_{N0}). The final concentration (C_{N60}) was determined 60 minutes later

New filters and HEPA have been used for each chemical test.

Calculation:

$$A_1 = \frac{C_0 - C_{60}}{C_0}$$

$$A_2 = \frac{C_{N0} - C_{N60}}{C_{N0}}$$

$$\text{Removal Efficiency} = \frac{C_0(1 - A_2) - C_{60}}{C_0(1 - A_2)}$$

NO2 Conc. for untreated air	C_2	=	83.2857	ug/m^3						
Total NO2 Conc.	C	=	$\frac{V_1 \times C_1 + V_2 \times C_2}{V_1 + V_2}$							
		=	$\frac{10340 \times 6.66286 + 7389.28 \times 83.286}{17729.28}$							
		=	38.598						<	40 ug/m^3 OK

From the calculation above, it is demostrarted that the removal efficiency of the Air Purifier could achieve a removal efficiency of 92% under a controlled environment.

As the concentration of NO2 ranges from 67 to 103 ug/m3 and the concentration of NO2 after treatment is less than 40 ug/m3, i.e. Removal efficiency = (67 - 40)/67 = ~40%
Therefore, a removal efficiency of 40% is taken for the calculation of the required amount of APS for the sensitive receivers under different environment. (i.e. more conservative evaluation)

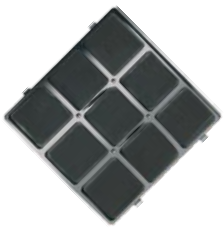
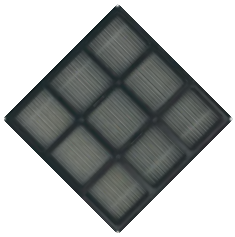
NCCO AIR TREATMENT UNIT

◎ Professional Solution of Air Pollution Problem

- One Touch to Purify
- Intelligent Operation
- NCCO Technology
- Efficient Dust-Removal
- Multiple Modes to Choose
- Low Noise Operation



Pre-Filter
Removes dust and hair.

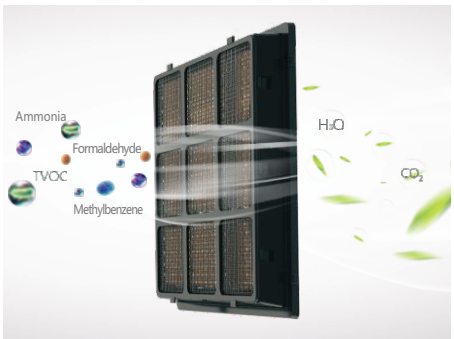


HEPA Filter
Removes dust, hair and suspended particles, such as allergen, pollen, bacteria, virus and fungus.

NCCO Reactor
Removes odour, decomposes and oxidises formaldehyde, VOCs and other pollutants.

Effectively Removes Indoor Air Pollutants

◎ No Activated Charcoal ◎ No Secondary Pollution ◎ Environmental & Regenerative ◎ Long Lifetime



◎ HEPA Filter

Traps larger particles; effectively protects the following filters; wear-resisting, high hardness; the capacity is the 6 - 8 times of other similar products.

◎ NCCO Reactor

Once the activated charcoal has become saturated, there will be a significant reduction in adsorption function. The absorbed pollutants will then be released again into the air in low concentration causing secondary pollution. On the contrary, the NCCO Reactor is designed with its continuous decomposition system which is very environmentally friendly and with this renewal technology the Reactor can be used for an exceedingly long period of time.

◎ Pre-Filter

Removes dust and hair.

Appendix 3.8E – Implementation Plan, Commissioning Test Plan, Performance Test Plan, Maintenance and Contingency Plan, Responsible Matrix, and proposed Measurement Instrument

(A) Implementation Plan

1) Provision of Air Purifier according to the following table:

Affected ASR	Affected Sensitive Area	Number of Portable Air Purifier	Proposed Air Purifier Model
A52 – North West Tsing Yi Interchange Maintenance Workshops	Workshop Office	2	2 x EC920
	Total	2	
A55 – Lantau Link Visitor Centre, Viewing Platform & Model Train Shop	Lantau Link Visitor Centre	3 (for exhibition hall) 1 (for staff office)	3 x EC920 1 x BM150
	Nana Café	1	1 x EC920
	Model Train Shop	3	3 x EC920
	Total	8	

2) Appointment to be made with staff at visitor centre prior to installation
3) Confirm the location for installation with staff at visitor centre
4) Provide briefing and User Manual to the ASRs;

(B) Commissioning Test Plan

1) Objective: To justify the adequacy and nos. of the proposed Air Purifier
2) Schedule: Upon commissioning of the Air Purifier at the ASRs
3) Measurement Method:
   (a) measure the ambient NO_2 concentration at indoor and outdoor simultaneously (measurement locations to be determined by the Environmental Team on site);
   (b) measure hourly NO_2 concentration in 24 hours to capture daily fluctuation on the measurement date;
   (c) compare the NO_2 concentration at indoor and outdoor and determine the effectiveness of the Air Purifier.
   (d) Measurement duration: 1 day
4) Acceptance Criteria:

   Step 1: Calculate the NO_2 removal efficiency by the following equation:

$$\text{Removal efficiency } (\%) = \frac{\text{Outdoor } NO_2 - \text{Indoor } NO_2}{\text{Outdoor } NO_2} \times 100\%$$

Remark: The Outdoor and Indoor NO_2 concentration are referring to the daily average of the 24 hours NO_2 readings on the measurement day.

Criteria: the NO_2 removal efficiency shall reach at least 60% or above

Remark: 60% is set from the assumption of the past performance in the available job reference and the anticipated fluctuations due to the possible measurement uncertainties.

Step 2: Compare the measured daily average of indoor NO_2 concentration against the absolute value of 40 μg/m^3

Criteria: Measured daily average of Indoor NO_2 level shall be at 40 μg/m^3 or below

It is to cater for the situation where the initial concentration may be on the low side which is difficult to achieve the target removal efficiency.

5) Action requires if non-compliance: additional Air Purifier(s) shall be deployed and repeat the above commissioning test until the acceptance criteria [as stated in Item B(4) above] can be reached.

(C) <u>Performance Test Plan</u>

1) Objective: To evaluate the performance of the Air Purifier
2) Schedule: On a monthly basis after commissioning
3) Measurement Method: Same as those described in the commissioning test
4) Acceptance Criteria: Same as Item B(4).
5) Action requires if non-compliance:
   (a) Check, clean, maintain or replace the filter(s); or
   (b) Replace the faulty Air Purifier by spare unit(s);
   (c) Repeat the performance test until the acceptance criteria is reached.

(D) <u>Maintenance and Contingency Plan</u>

1) If the NO2 removal efficiency of the Air Purifier is lower than 60% after the ad/hoc maintenance work for any malfunction of the equipment or regular maintenance work

by replacement of filters, another Air Purifier shall be deployed for treatment of air pollutants.

2) 1 no. spare unit is ready for immediate replacement of mal-functioned Air Purifier upon notification.
3) Regular maintenance schedule: The HEPA filter shall be replaced every 6 months while the NCCO filter shall be replaced every 3 years under normal operation condition inside this building.

(E) Responsibilities matrix

Actions	**Responsibilities Parties**
Implementation Plan	The Contractor of DC/2020/05
Commissioning Test Plan	The Environmental Team (for measurement);
Performance Test Plan	The Contractor of DC/2020/05 (for follow-up actions)
Maintenance and Contingency Plan	The Contractor of DC/2020/05

(F) Proposed Measurement Instrument

Proposed Instrument: Aeroqual Air Quality Monitoring Instrument AQS1 equipped with Nitrogen dioxide (NO_2) module [or equivalent]

By the specification, the instrument can reach the resolution of 0.1 ppb. Also, this instrument (AQS1) can achieve a high correlation, i.e. R2>0.9. Please see enclosed the product catalogue, specification and reference for the correlation assessment.

AQS 1

Specification Sheet

Near reference real-time monitor for particulates plus O_3/NO_2/CO/VOC

Designed for environmental professionals who need to monitor and manage specific outdoor dust and particulates, and gases continuously and in real- time.

The AQS 1 delivers affordable and defensible measurement of PM_{10}, $PM_{2.5}$, PM_1, TSP, and up to three gases, O_3, NO_2, CO, and VOC, all simultaneously.

MCERTS certified for PM_{10} by the UK Environment Agency.

What is it?

- Reduce failure and downtime thanks to this robust purpose-built outdoor monitor for dust and gaseous pollutants
- Industry-leading gas sensing technology from Aeroqual comes fully integrated in the same compact format
- Reduce site visits using two-way communications – remotely troubleshoot, upgrade software, change settings, and calibrate
- Plug in all your devices – noise, weather, reference monitors – to the AQS 1 power and data interface and view data in one software dashboard
- Power up with quick and easy interface to solar and battery systems
- Respond in real-time via configurable email / SMS alerts

What can it measure?

- Specific dust fractions, wind, weather and noise

Who is it for?

- Industrial operators who need to manage dust and particulates from site activities, within regulatory or permitted limits:
  - Construction and remediation
  - Oil and gas facilities
  - Quarry and mine operators
  - Port and bulk handling terminals
  - Waste management sites
- Environmental consultants who want defensible data without the usual time and hassle of air monitoring projects
- Regulatory authorities who need to fill the gaps in the regulatory PM monitoring network
- EHS managers who need to demonstrate that they are providing a safe environment for the people in their care
- Researchers who want to collect accurate, scientifically robust data without the cost of a reference PM monitor

COMPARISON OF AEROQUAL'S AQS-1 WITH MCERTS APPROVED REFERENCE ANALYSERS

Until now we have referred to Aeroqual's sensor technology as "Near Reference" but with the development of a new specific NO2 sensor combined with the AQS1's reference flow technology we are now seeing data, from this tiny box, of the accuracy you would expect from a reference (MCERTS) analyser. This will allow you to get accurate data from confined spaces for NO2, Ozone, PM1, PM2.5, PM10 and TSP. Aeroqual's unique technology means it can be calibrated directly from calibration gas on site for full QA/QC. LSO (site visits) are only required every 3-6 months so reducing operation costs and saving time. The simplicity of operation of this system further reduces operation costs and improves reliability and data capture rates. This is shown by the study below.

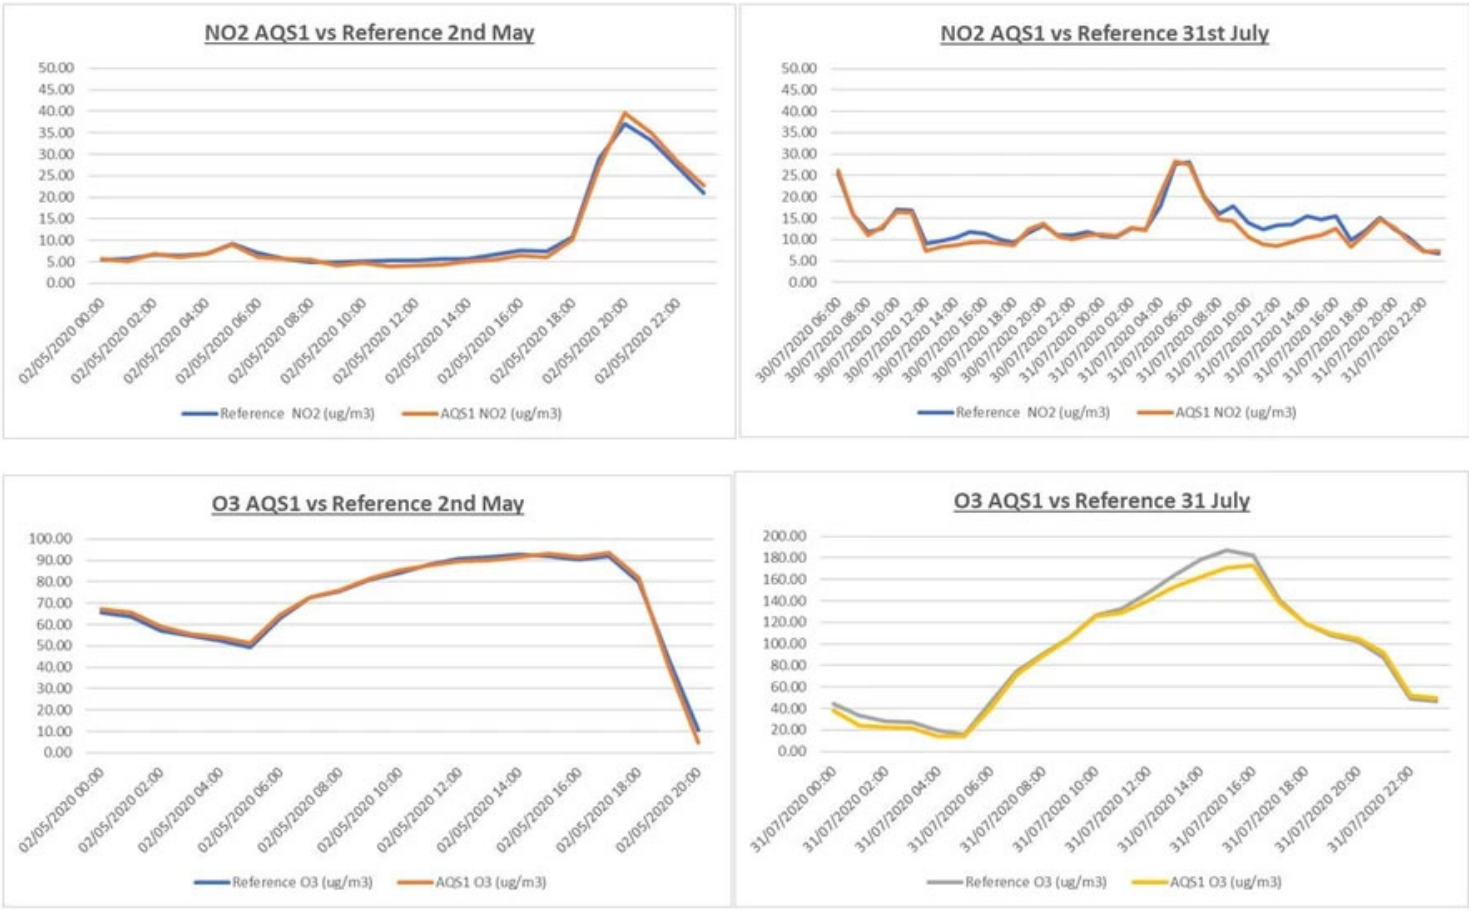
Figure 1: Reference Analyser Cabinet with Aeroqual AQS1 and AQYs

Figure 2: Six AQS1 Monitoring Stations in a Yaris Hybrid!

Comparison of AQS1 vs Reference NO2 over 3 Months:

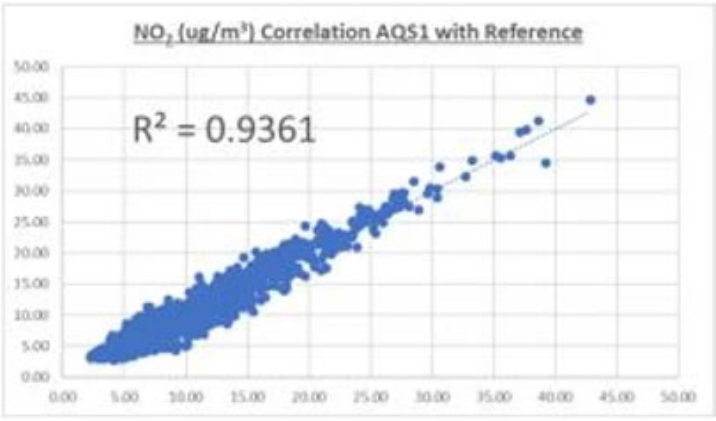
From April to July 2020 an AQS1 was operated close to our reference chemiluminescent NOx analyser (see figure 1). Neither instrument was adjusted during this period, so it has not been possible to apportion drift between the two instruments. However, the data does show just how closely the two analysers tracked each other over a period of more than three months without calibration or adjustment.

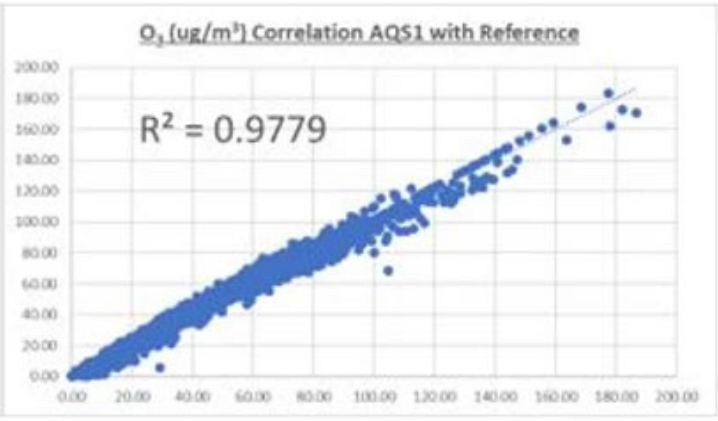
The graphs below show how closely the two instruments agreed over three months for when peaks in levels occurred near to the beginning and end of the trial.



Three Month Regression Plots of Hourly Mean Values

The regression plots below show how the AQS1 agreed with the Reference analysers over the three months of the trial. Nitrogen Dioxide levels were unusually low during this period resulting in a lower R2 value for NO2 but correlation at the 40ug/m3 annual limit was excellent. Ozone levels were much higher at times and shows even better correlation, although this is mainly due to Aeroqual's unique ozone measurement technology.





Time Series Plots and Data Capture

The reference NOx analyser was offline on 17th and 18th June due to a fault. A further failure occurred on 27th and 28th July. The trial was curtailed when both reference analysers were taken away for repair. The AQS1 showed no faults during the three months and is still in operation on 14th September. Data capture for the AQS1 was 100%.

Dear Mr. LAM,

Please note that my colleague Stephen LAU (stephenlau@td.gov.hk) attended the site meeting on 12 May 2022. As far as I know, representatives from the MOM operator and EMSD had also joined the meeting and you may request them to provide the names of their attendees.

Please find the required MVAC layout drawings of Tsing Yi Administration Building below:

Since the air handling units (AHU-01, AHU-02, PAU-01 & PAU-02) are still being replaced, no details for these items are available at this moment. However, attached are name plate photos of the new equipment being installed for your reference.
Lastly, please be reminded that the proposed mitigation measures shall be endorsed by EPD before such measures can be implemented at Tsing Yi Administration Building and the workshop .
Regards,
Steven CHAN
Transport Department

No objection to install the proposed mitigation measures of portable air purifier from Transport Department

Dear Mr. LAM,

Provided that the conditions that are satisfied, we have no objection to your plan to place a total 3 portable air purifiers (Brand named “b-Mola”, Model no. NCCO1702) as the mitigation measures of NO2 for the indoor area (Visit Centre, NANA Cafe and the kiosk next to NANA Cafe) within the Lantau Link Viewing Platform.

Please contact Ms. Ivy CHOW at 2494 4536 for the installation and future routine maintenance and filter replacement. Thank you.

Subject: RE: DC/2020/05 - Follow up on Installation of Air Purification System (APS) at the Indoor Area within the Lantau Link Viewing Platform

Dear Ms Abble Ho (HAD),

Thank you for your kind reply!

For condition (iv) “yourside, including but not limited to sub-contractor, contractor and DSD, will be responsible for routine maintenance and filter replacement of the APS, including operation and cost”; Please be assured that China State – Alchmex Joint Venture will be responsible for the routine maintenance and filter replacement of the APS, including operation and cost.

Since the conditions listed are satisfied, I would considered that no objection to our plan to install an air-purification system for the indoor area (Visit Centre, Hobby NANA Cafe and the kiosk next to Hobby NANA Cafe) within the Lantau Link Viewing Platform if no further comments / advices received by 31 March 2022.

Thanks and regards,

Dear Sir/Madam,

Agreement No. CE 30/2014 (DS)
Relocation of Sha Tin Sewage Treatment Works to Caverns:
Caverns and Sewage Treatment Works – Investigation, Design and Construction

Request for Information of Chemical Waste Producer and Chemical Spillage Accident

AECOM Asia Co. Ltd. has been commissioned by Drainage Services Department as the Consultant to undertake land contamination assessment for the captioned project. The Concerned Areas (Wok Tai Wan, Ngau Kok Wan) are indicated in the enclosed **Figure 1**.

As part of the land contamination assessment and following the *Practice Guide for Investigation and Remediation of Contaminated Land* issued by EPD, we have to collect historical information regarding the past and present activities of the Concerned Areas. In order to facilitate our assessment, we would like to request for the following information regarding the captioned Concerned Areas:

1. Current and past (as early as the records are available) registered Chemical Waste Producer(s) within the Concerned Areas (preferably with the registration date, status (moved out or active), nature and quantity of the chemical waste); and
2. Reported accidents of spillage / leakage of chemicals within the Concerned Areas.

Please feel free to contact our Mr. Robert Yuen at 3922 9439 should you have any queries.

Thank you very much for your kind assistance.

Yours faithfully,

Dear Mr. Ng,

I refer to your letter dated 20 November 2020 (ref.: (29) in FSD GR 6-5/4 R Pt.30) regarding our captioned enquiry.

To further assist our land contamination assessment, could you please kindly provide the exact DG storage locations (e.g. name of building / site) of the “Ground floor DG stores” detailed in Appendix A of your letter as attached?

Thank you for your assistance. Should you have any queries, please do not hesitate to contact the undersigned.
