Health Advice on the Prevention of Influenza

Global and local situation

On 26 January 2004, health authorities in Thailand announced laboratory confirmed H5N1 infection in three children. In Vietnam, as of 24 January 2004, there were 7 laboratory-confirmed cases of infection with H5N1 virus. Six of them died. Concurrently, H5N1 avian influenza outbreaks among poultry have been reported in many Southeast Asian countries including Cambodia, Indonesia, Japan, Korea, Thailand and Vietnam. At present, the World Health Organization stated that there is no evidence that person-to-person transmission is occurring.

Human infection with avian influenza H5N1 is under close surveillance in Hong Kong by the Department of Health. During the recent three weeks, there is no abnormal rise in influenza activity. No human influenza H5N1 infection has been detected in Hong Kong since the last two cases in February 2003.

Preventive Measures

In view of widespread H5N1 infections among poultry in many neighboring countries, as well as confirmed human cases in Vietnam and Thailand, the Department of Health advocates an active and prudent approach in taking preventive measures. Staff of Child Care Centres / Kindergartens / Schools are advised to educate the schoolchildren and their parents to take note of the specific measures highlighted below for the prevention of avian influenza and influenza in general:

- Refrain from keeping live birds in school/centre where possible
- Establish barriers to prevent children from touching live birds
- Do not touch live birds, poultry and their excreta
- Avoid organising activities that may expose children to live birds
- Wash hands with soap and water immediately after contact with live birds or surfaces contaminated by bird droppings
- Wash hands with soap and water after sneezing/coughing
- Cover nose and mouth when sneezing or coughing
- Keep hands clean and wash hands properly, use liquid soap for hand
washing and disposal towel for drying hands

- Do not share towels
- Cleanse used toys and furniture properly
- Maintain good ventilation
- If they develop respiratory symptoms; they should
  - Consult their doctor promptly
  - Wear a surgical mask
  - Take rest at home and refrain from school/centre as advised by their doctor

Apart from the above specific measure, staff of Child Care Centres / Kindergartens / Schools are advised to educate the schoolchildren and their parents to build up good body immunity by having a proper diet, regular exercise and adequate rest, reducing stress and avoiding smoking as precautionary measures to prevent respiratory infections.

You are also advised to refer to the ‘Guidelines on Prevention of Communicable Diseases in Child Care Centres / Kindergartens / Schools’ published by the Department of Health for general information on the prevention of communicable diseases in school and institutional settings.

The Department of Health stands ready to offer advice and assistance to your school/center in the control and prevention of communicable diseases. If staff detect unusual pattern of illnesses/sick leave among children, please notify such incidents to the respective Regional Office of the Department of Health.
